ANNUAL REPORT 2012
FISCAL YEAR ENDED MARCH 31, 2012
That is our GLOBAL ONE.

Mori Seiki has always been supporting the basis of manufacturing as one of the general cutting machine tool manufacturers. The process was always the history of changes and challenges.

And now, what we are aiming for.

That is to be the No. 1 machine tool company for customers.

We always pursue the best technology and service, and provide new value and unlimited potential of machine tools to the customers.

Mission Statement

As a global corporation continually striving to be the world’s largest and most respected international manufacturer of lathes, machining centers, multi-axis turning centers and grinders, we will:

Enable our customers to maximize their advantages and excel in their respective markets by continually striving to provide innovative, accurate and trouble-free machines at competitive prices; Increase our customers’ productivity and efficiency through our latest developments in technology as manifested by our increasingly accurate and progressive manufacturing capabilities;

Support our customers with our knowledgeable and responsive sales, applications and service personnel.

As befits a worldwide corporation, we will:

Foster a fair and open corporate culture, utilizing appropriate management initiatives; Emphasize company-wide communication with the recognition of earnest and enthusiastic team-oriented efforts; Respect each other’s opinions and continually develop through friendly competition in energetic and cheerful workplaces.

As profitability is a goal of all healthy business organizations and in keeping with the true nature of the machine tool industry, we will:

Work to increase the value of our company, the investment of all shareholders knowledgeable of the true nature of the machine tool industry and the prosperity of our suppliers; Always remember that the pricing of our products and services is an integral factor in the prosperity and perpetuity of the corporation; Generate suitable profits to ensure the cash flow necessary to provide for the healthy operation of our corporation, research and development, stable customer services, employee training and development and the maintenance of safe and efficient manufacturing facilities.

As an industry leader and responsible corporate citizen, we will:

Contribute our fair share to our local community and society; Conserve environmental resources at all times to preserve the global environment; Incorporate the highest standard of ethics while still encouraging an aggressive approach to our business activities.

Note concerning statements about the future, etc.

This material contains earnings estimates, plans, policies, business strategies, targets, forecasts, and perceptions and judgments about matters of fact concerning the future of Mori Seiki and the Mori Seiki Group. Its predictions, expectations, assumptions, plans, perceptions and judgments are based on information available to Mori Seiki at the time of writing. For this reason, there is a possibility that actual results may differ significantly from those forecasts. There are various risks or factors, such as facts which are not included here, or premises which may be objectively inaccurate, which may prevent these predictions from coming true. Among these, we are able to identify the major assumptions which we are currently making as listed below. (Please note, however, that the risks and factors are not limited to these.)

(1) The economic conditions in key markets (Japan, the Americas, Europe, Asia, etc.)
(2) Fluctuations in demand for investment in plant and equipment
(3) Significant changes in the exchange rate against the yen of the U.S. dollar, Euro, etc.
(4) Significant changes in the cost of natural resources or raw materials
(5) Future trends in Japan’s relationships with the U.S.A. and with China
(6) Changes in the international situation resulting from increased risk of terrorism, etc.
(7) Damage from natural disasters such as hurricanes, earthquakes, etc.
Message from the President

To the Shareholders

We are pleased to present the 64th Annual Report (from April 1, 2011 to March 31, 2012) of the Mori Seiki Group.

President Dr. Eng. Masahiko Mori

For the fiscal year (FY 2011), the machine tool industry saw a steady growth in inquiries and orders despite concern over the impact of financial instability in Europe and the tight monetary policy in China. This was buoyed by strong demand from overseas, particularly from Asia and the Americas. According to the Japan Machine Tool Builders’ Association, the industry’s total order value for FY 2011 nearly doubled compared to that for the previous fiscal year. We expect the active overseas demand will also help increase orders for our products in the future.

In this business environment, the Mori Seiki Group made a contribution in kind of all shares of its four consolidated subsidiaries in Europe: MORI SEIKI (UK) LIMITED, MORI SEIKI FRANCE SAS, MORI SEIKI ITALIANA S.R.L. and MORI SEIKI ESPANA, S.A., to DMG MORI SEIKI Europe AG, a joint corporation between Mori Seiki and GILDEMEISTER AG, and in exchange acquired shares in DMG MORI SEIKI Europe AG in March 2012. Through this partnership with Gildemeister, we will expand our sales in the regions. We exhibited our X-class machines at GILDEMEISTER’s Pfronten Open House held in February 2012 and received many orders from customers. We have displayed GILDEMEISTER machines at Innovation Days 2012 held at Mori Seiki’s Iga Campus in June, and plan to do the same at the International Manufacturing Technology Show (IMTS) to be held in the U.S.A. in September, and at JIMTOF 2012 which will be held in November. Through these efforts, we will further strengthen cooperation between the two companies.

With regard to products, the NTX2000 won one of the “2011 (the 54th) Best Ten New Products Award” sponsored by Nikkan Kogyo Shimbun in January 2012. In March, we launched the NVXS5000 Series as the successor to our popular NVX5000 Series of high-rigidity, high-precision vertical machining centers. We will contribute to expand the lineup of our flagship X-class series, with the aim of meeting a wide variety of customer needs including machining of large parts and difficult-to-cut materials, which has been in great demand in the construction machinery, aircraft and energy industries. On the production front, in February 2012 we introduced the Radiation Monitoring and Control Process at our Iga, Nara and Chiba Campuses and Ibaraka office of our consolidated subsidiary, Magnescale Co., Ltd, and obtained certification from TÜV Rheinland Japan, one of the world’s leading independent inspection agencies. The purpose of introducing this process is to eliminate the concern over radioactive contamination in products exported from Japan, and to provide safe, reliable products for customers throughout the world. At the new plants in the Iga Campus, we will seek to improve the efficiency of the parts machining, unit assembly and machine assembly processes to achieve even greater productivity.

Our third medium-term management plan, “GQ-C-SI 123” (Global Quality for Customer with Speed and Innovation 123), started in FY 2011. This management plan outlines the company’s objectives to provide high-quality products and services to customers worldwide as quickly as possible. Based on this vision, we aspire to build robust development, manufacturing and sales capabilities by thoroughly implementing strategies such as expanding the range of the X-class machines.

The Mori Seiki Group will continue to expand its businesses on a global basis and actively implement strategies for medium and long-term growth.

Under these circumstances, our consolidated sales were 155,320 million yen (a 29.0% increase from the previous fiscal year), consolidated operating profit was 6,789 million yen (320 million yen; the previous fiscal year), consolidated ordinary profit was 5,915 million yen (566 million yen; the previous fiscal year) and consolidated net profit was 5,619 million yen (1,307 million yen; the previous fiscal year). Our fundamental policy is to provide long-term stable dividends to our shareholders based on an overall judgment about our future business plan, business results, financial conditions, investment in development of new products and technologies, and investment in plant and equipment. For the year-end dividend, we decided to pay a dividend of 10 yen per share, after taking into account our business results and economic conditions. (Together with the interim dividend, the total dividend per share for the year is 20 yen.)

Mori Seiki will continue to strive for growth in the future, so we look forward to continued support and guidance from you, the shareholders.

Return on equity 6.0%

Net income per share 51.13 yen
Cash dividends per share 20 yen

Total assets 185.4 billion yen
Net assets 94.7 billion yen
Medium-Term Management Plan

Based on our mission statement, Mori Seiki expects to be the best fit for customers and a worldwide pioneer in the machine tool industry. Our strategy to achieve this vision is implementation of the third medium-term management plan “GQ-C-SI 123,” covering the three-year period from FY 2011 to FY 2013.

To realize our goal of “staying a step ahead with innovative solutions,” we are promoting active investment and business collaboration.

[VISION] We aim to be a company staying a step ahead with innovative solutions.

Global Quality for Customers with Speed and Innovation

Globalization of Product Bases
While consumption of machine tools is expanding globally, we proceed with globalization of production bases and sales bases. We reduce “risk of exchange fluctuations” by local procurement and production, and minimize “transport lead time and cost” by producing machines in those regions with greatest demand.

Launch and Evolution of X-Class
We launched the X-class as cutting-edge models in the fields of lathes, machining centers, and multi-axis machines. In FY12, we strive to enhance the series and develop machines that satisfy customers’ needs and expectations.

Sales of Gildemeister Products
We started to sell Gildemeister’s “LASERTEC” with laser machining technology and “ULTRASONIC” with ultrasonic machining technology. These models have allowed us to provide our customers with new solutions.

Recovery of Sales and Operating Profit Ratio
Both sales and operating profit ratio are increasing. In FY11, sales increased by 29% from the previous fiscal year, and our operating profit ratio recovered to more than 4%. In FY12, the demand for machine tools have continued to increase steadily.

Increase of Share in Emerging Countries
We have maintained a global JMTBA share of more than 10% since last fiscal year, and our share in emerging countries in Asia and China is increasing. To further increase share in these promising markets, we will penetrate our brand and expand sales.

Graph: Trends in JMTBA share

Business and capital collaboration with GILDEMEISTER AG

Although Mori Seiki and GILDEMEISTER are based in different countries with different backgrounds and cultures, the two companies are both rooted in a culture of continual and unflagging improvement of products and have both been fostered by customers. In March 2009, the two companies, both among the top class machine tool builders in the world, joined forces in business and capital collaboration in order to make further progress. This business and capital collaboration has expanded the scale of the company as well as the product lineup. With the world’s largest product lineup, which covers everything from lathes to a variety of 5-axis control machines, we are now able to give much more support to our customers than we have been able to in the past. With the powerful DMG / MORI SEIKI logo that adopts the green and red the two companies aim to increase the synergetic effects of the strengths on both sides. GILDEMEISTER and Mori Seiki will continue to develop through friendly competition to provide even better products and service to the customers.

Progress of the business and capital collaboration

The business and capital collaboration with GILDEMEISTER that was launched in March, 2009, has made significant progress in integrating sales networks, supplying parts, conducting joint development, and providing financial services for our customers. In April, Mori Seiki acquired additional shares issued by GILDEMEISTER. This makes the ratio of the number of shares held by Mori Seiki to the total number of shares issued by GILDEMEISTER 20.1%, further strengthening the collaboration between the two companies.

By making the most of the integrated technical strengths and sales networks, Mori Seiki continues to provide products and service that offer greater productivity for our customers.

Cooperative efforts with GILDEMEISTER

1) Sales and service

Mori Seiki and GILDEMEISTER started joint sales and service in Thailand, Indonesia, Taiwan, Turkey, Japan, Korea, and Australia in 2009, followed by India and the United States in 2010. In May, 2011, we collaboratively established a new technical center in Bangalore, India. Furthermore, in September, 2011, we integrated the sales and service bases in Germany. At the EMO Hannover 2011, European International Machine Tool Fair held from September 19 to 24, 2011, Mori Seiki exhibited in the largest-ever booth collaborating with GILDEMEISTER. It allowed us to impress the European market with our strong ties. In January, 2012, we established the DMG / Mori Seiki Europe Head Quarters in Switzerland, and completed integration in European countries other than Germany. Thanks to the business and capital collaboration, the product lineup covers all types of machines from lathes to a wide variety of 5-axis machines. This world’s largest product lineup allows customers to find the best machine that suits their needs.
Business and capital collaboration with GILDEMEISTER AG

2) Production on a global basis
In addition to its existing plants in Japan, Mori Seiki will use GILDEMEISTER’s production bases in Europe and Shanghai. A new plant in North America has begun its operation in July, 2012, and another in Tianjin, China, is scheduled to start in autumn of 2013. Deconcentration of the production bases allows us to reduce delivery time and mitigate foreign currency exchange fluctuation risks, as well as to create a solid business structure. Mori Seiki also supplies spindles, ball screws and turrets, which are major machine tool components, to GILDEMEISTER.

3) Procurement on a global basis
Mori Seiki established the Europe Purchasing Department in April, 2011. Through the collaboration with GILDEMEISTER, we procure parts from first-class suppliers in Europe and casting from the competent suppliers in China aiming to establish a well-balanced procurement system by purchasing parts from suppliers both in Japan and overseas. Additionally, we will increase the number of products certified as MSOP (Mori Seiki Qualified Products) and will provide a wide range of peripheral products for our customers.

4) Joint development and production
DuraVertival 635 eco vertical machining centers and Dura Tum 310 V3 eco turning centers, both machines manufactured in GILDEMEISTER’s Shanghai Plant, have joined Mori Seiki’s product lineup. Mori Seiki in return supplies the NT6600 DCG high-precision, large integrated mill turn centers and NTX1000 high-precision integrated mill turn centers to GILDEMEISTER as an OEM product.
We also jointly developed the compact machining center MILLTAP, and released it at Mechatronics Technology Japan Show in September, 2011. With this next-generation compact machine, we offer enhancement of productivity and efficiency as well as new machining processes.

5) Financial services for customers
To provide financial services for customers, Mori Seiki established a joint leasing company, MG Finance GmbH. We will increase orders from both existing customers and new customers by providing financial service in major European countries.

* Created based on GILDEMEISTER AG Annual Report 2011
Research & Development

Original Technology
“I want to machine with high accuracy”, “I want to shorten machining time”, “I want to run efficient production.” These are the eternal issues for customers involved in machining.
The difficulty level of solutions required for high accuracy, high speed, and high efficiency issues has become extremely high. Mori Seiki seeks to provide solutions continuously by developing technologies to address customers’ ever-evolving issues. We will meet customer needs with six original technologies that will rewrite the history of machine tools.

DCG (Driven at the Center of Gravity) “Technology to minimize vibration”
Vibration occurs when rotational moment is generated from moving machine structural parts, and it has had a negative effect on surface quality and machining accuracy. Our DCG technology, which drives the moving structural parts at their center of gravity, controls residual tool tip vibration, improves accuracy and acceleration, and extends tool life.

DDM (Direct Drive Motor) “The world’s fastest rotary axis drive system”
Until now, drive force has been imparted to rotary axes through worm gears, resulting in adverse effects on drive speed and accuracy. By transferring the drive force directly, without going through a gear, DDM technology has achieved highly efficient drive.

BMT (Built-in Motor Turret) “A revolution in turret milling”
The milling power of conventional lathes is low, and since there were many parts like gears and belts transmitting the drive power from the motor, heat and vibration spread over a wide area. By placing the motor inside the turret, the BMT reduces temperature increases in the turret to less than 1/10. In addition to minimizing heat and vibration, this increases the transmission efficiency, offering milling power and machining accuracy approaching those of a machining center.

ORC (Octagonal Ram Construction) “Octagonal shape for a revolutionary feed”
ORC is a revolutionary feed mechanism, making the ram a perfect octagonal shape. It preserves the advantage of conventional square guides (their damping characteristics) while overcoming the problem of thermal displacement caused by temperature increases in the slideways. Each slideway, located diagonally from another, offsets the other’s thermal displacement because distortion in response to heat is symmetrical. For this reason, the center of a moving part can be maintained in the same position, achieving high-precision machining during high-speed travel.

MAPPS IV (New High-performance Operating System)
“Realization of overwhelming performance and outstanding operability”
MAPPS IV incorporates a host of operator-oriented functions such as the ESPRIT® CAM software that shortens programming time, a large 19-inch display that enables more intuitive operations, a PC-type keyboard and enhanced maintenance functions, and it provides strong support for the machining processes of customers all over the world.

Magnescale “High-speed, high-precision, high-resolution scales”
Magnescale products are magnetic scales well-suited to machine tools because they enable measurement in various environments where measurement is not possible with optical scales that read contrast grids, for example where there is condensation or in oil. Since they have the same linear expansion coefficient as the cast iron used for the structure of the machine, they expand and contract with the same thermal characteristics as the machine in environments where the temperature changes, making high-accuracy machining possible.
Current Situation and Future Prospects for Product Development

Last term, we launched the X-class that was developed by evolution from our best-selling N Series (28,000 units sold) by meticulously incorporating feedback from thousands of customers to offer high precision, high quality, and high reliability. The X-class lines up new models covering all types of CNC lathes: vertical machining centers, horizontal machining centers, and multi-axis machines. We will further expand the product lineup and strengthen sales in overseas markets by developing products with high levels of rigidity, energy-saving measures, safety standards, and other features by reflecting market needs and through multidirectional analysis of existing products.

The X-class has established new standards in accuracy and machining capability and encompasses model changes to all our core products. During this fiscal year, while enriching the X-class lineup, we will develop machines that address the issues of difficult-to-cut materials and grinding in response to the expanding demand in fields including aircraft, jet engines, power generators, and construction machinery. We also aim to produce results that include continuous high-speed in-machine measurement using lasers and reduction of machining time and improvement of machining accuracy by reviewing the entire process from CAM systems to machine tools.

Mori Seiki has been developing new products to meet customer needs, such as the NHX10000, a high-speed, high-precision horizontal machining center capable of machining large-scale parts with increased efficiency and accuracy.

On the development front in particular, to meet diversifying needs in the machine tool market, we have released new models that are increasingly in demand through the X-class lineup, including construction machines, machines for difficult-to-cut materials in the aircraft and energy industries, machining centers for mass production line of automobile parts, and MILLTAP 700, a compact machining center that is currently being developed in collaboration with GILDEMEISTER with a strong focus on high speed and high cost performance.

In the area of elemental control technologies, we have released the fourth generation of the high-performance operating system MAPPS IV, now called MAPPS IV-B. This new system has maximized operability by improving ease of use, reliability, serviceability, and maintainability via feedback from the markets to better support customers.

In addition, we have developed a non-contact in-machine coordinate measurement system, S-Quad, to address demand for machining with greater accuracy and efficiency. S-Quad enables the measurement of large workpieces that are difficult to measure using traditional coordinate measuring machines, and the measurement of contoured shapes and curved surfaces with small curvatures that are difficult to measure by probing. Moreover, measurement results can be reflected in machining immediately, which has enabled us to propose new machining methods to customers.

As for software, we have developed a new multi-pallet transfer control system, MCC-LPS III. MCC-LPS III incorporates a wide range of functions from machining schedule creation/registration to transfer system status monitoring to various reporting functions to maximize the operation and administration efficiency of the pallet transfer system.

Magnescale, our subsidiary, has newly-developed linear and rotary scales (their leading products), which enables GILDEMEISTER’s machines equipped with Siemens’ NC to mount Magnescale’s high-speed, high-accuracy and high-resolution scales. They also plan to release a laser scale “Z sensor” for semiconductor manufacturing equipment, which is the world’s first sensor capable of long-distance (millimeter) measuring at the picometer level.
Research & Development System

Mori Seiki currently employs about 500 development engineers for research and development of new models, control technology, elemental technology, fixtures, and peripheral equipment. Based on the notion that “every outcome depends on the concept,” we take on development with emphasis on fundamental conceptual design at DTL (Digital Technology Laboratory) in the United States, Mangescale, BUG, and other R&D sections. These are led from the Development Centers at the Iga, Chiba, and Nara Campuses. After design and verification using the latest digital design techniques, we go through durability evaluation testing before completing the prototype, getting as close as possible to a fully completed product at the design stage. These comprehensive research and development systems constitute the building blocks of our high overall development capability. With the aim of reducing prototype development periods and the number of prototypes manufactured, all design and development is carried out with digital design techniques using 3D CAD systems. This enabled us to increase the speed of development of new models and release multiple models into the market simultaneously. Beyond handling elementary technology development and analysis for machine tools, including dynamic analysis, DTL also plays a role as the base for analytical technology and application development, and develops programming-related application systems, simulation software, post processors, CL engines, and other products.

Mori Seiki is also developing an operating system that functions as the man-machine interface in collaboration with subsidiary BUG. New developments further include a wide range of control technologies that achieve innovations on the production floor, including the fourth generation NC unit MAPPS IV, network technologies, and remote maintenance services extending from MAPPS IV, cell control systems, tool management systems and DDMs (Direct Drive Motors). We are conducting practical research and development work on fixtures and peripheral devices by designing and manufacturing them. We design and manufacture fixtures by thoroughly checking for possible interference and analyzing fixture parts using 3D CAD systems; these are mainly fixtures for customers and in-house fixtures. We also develop and design-to-order loaders and other peripheral devices for CNC lathes and machining centers. To provide better products to customers, the High-Precision Machining Laboratory runs Mori Seiki products under the same conditions as those found at customers’ locations and constructs mass production systems to verify the accuracy, performance, reliability, and maintainability of the products, and the know-how on mass production systems obtained through these operations is fed back to the development and manufacturing departments.

Development in Collaboration with Customers and with Universities

[Micro Machining Society]
Mori Seiki and Iriso Seimitsu Co., Ltd., jointly established the Micro Machining Society in May 2009. The aim of this organization is to conduct research on cutting-edge technologies to enhance knowledge and skills and to develop markets, new models, and software, specifically for the micro machining and free-form machining fields so we can provide customers with high-precision products.

[Research in Materials]
The Material Laboratory has started industry/university collaborative research into the use of lotus-type porous metal that combines both light weight and strength for the component parts of machine tools. This metal has excellent properties—not only the absorption of vibration due to its light weight, but also heat dissipation and absorption of sound. We aim to develop machines with excellent vibration absorption and energy-saving characteristics by adopting this material for columns and tables.
Manufacturing

Mori Seiki has built three manufacturing bases in Japan: the Iga Campus in Iga City, Mie Prefecture; the Nara Campus in Yamato-Koriyama City, Nara Prefecture; and the Chiba Campus in Funabashi City, Chiba Prefecture. In addition, our subsidiary Taiyo Koki and Magnescale have their manufacturing bases in Nagaoka City, Niigata Prefecture and in Isehara City, Kanagawa Prefecture respectively. We have also two overseas production bases in Switzerland and France, and in July 2012 we have begun production of horizontal machining centers at our new production base in California, USA.

As the market environment shifts towards multi-item, small-lot production, or even variable-item, variable-lot production, Mori Seiki has pioneered manufacturing methods to tackle the twin challenges of fast delivery and high quality. In the initial process of the manufacturing of machine tools, we have succeeded in increasing our capabilities of parts machining and reducing manufacturing lead time, by increasing both the quality and quantity of our machining equipment. In addition, we have completed an automated system for unmanned operation at night. Also, IT-based process management enables us to share information quickly and efficiently.
At Mori Seiki, we have been strengthening our efforts towards in-house production, to improve the quality and shorten delivery times of our machine tools: to this end we built the Heat Treatment Plant, Casting Plant and Sheet Metal Plant within the Iga Campus, and we also built the Spindle Plant, in which we perform the whole sequence of operations from spindle part machining to assembly and inspection. We are undertaking the in-house manufacture not just of spindles but also of key components that are related to accuracy, including ball screws, turrets and DDM (direct drive motors). We also manufacture the large-diameter bearings that are required for large machine tools to shorten delivery times. For assembly, we followed the example of the automobile production system and started line production for spindles and lathe turrets in an effort to improve production efficiency. We also plan on adopting line production for MILLTAP 700 that will be mass produced from this year on. We are taking various innovative approaches for higher quality and faster delivery, including assembly progress management using IT and creation of manufacturing environments as clean as a showroom.

Investment in plant and equipment

In FY 2011, we established the high-precision Bed/Column Precise Processing Plant equipped with air conditioners and a new assembly plant at the Iga Campus, aiming to shorten lead time and to further improve quality. Our subsidiary Magnescale also established new production equipment in the Iga Campus to increase production capacity. For enhancement of the facilities, we have built a manufacturing plant in the U.S.A. which began its operation this July, and another facility will start operation in Tianjin, China in September of 2013.
Engineering

In the automobile, aircraft, energy, construction/agricultural, and general industrial machinery industries, customer needs have been growing more diverse every year, including mass production of parts while maintaining accuracy, reduced running costs, and short delivery times for multiple-item, small-lot production of high-precision parts. To solve customers’ production issues, the Engineering Department provides innovative solutions for all kinds of technical issues concerning process designs, machines, machining conditions, fixtures, tools, peripheral equipment and software, as well as cell systems that include all of these.

As the trend for production bases that are closely associated with local markets progresses, demand for machine tools is becoming more global. For this reason, to create a system that enables us to provide prompt and optimal engineering support throughout the world, we have sited Engineering Departments with high levels of specialist knowledge in seven places around the world - Iga, Chiba, Paris, Stuttgart, Chicago, Ayutthaya and Shanghai. We also have solution centers in Iga and Chiba (Japan) and near major industrial areas in the Americas, Europe, and Asia to provide latest machines and machining technologies and solve machining issues of customers. These solution centers aim to improve customers’ productivity by supporting them in three key areas: machining demonstration, test machining, and advanced machining technology. The Engineering Department acts as technical support for the entire sales process, from technical proposals to submission of estimates, contracts, run-off machining, delivery and acceptance inspections, and also handles order placement, run-off machining, and delivery across multiple countries. We also make proposals based on local circumstances and work hard to meet requirements from both global and community-based businesses.

Resident Engineering

Since Mori Seiki has been founded, we have been sending our professional engineers to our customers at the beginning of each delivery. For those customers who seek a long-term support, we temporarily transfer application engineers on-site to provide customers with the best possible support. In 2007, the number of transferred engineers was 10, and as we expected service demand would rise, we established the Resident Engineering Department in March 2007. Resident engineers are carefully selected from application engineers who are capable of operating machines and have such in-depth knowledge of machining that, upon viewing a workpiece, they quickly understand which type of machining process should be used. We send these professionals to our customers long-term to provide them with solutions and support related to production systems and workpieces that are different by industry - such as automobile, construction machinery and aircraft industries. To date, we have sent a total of 30 resident engineers to 16 customers, and we will keep providing exceptional service for our customers around the world.
Responding to Diversified Needs

We also established the Important Customers Technical Sales Section for the purpose of providing technical support. This section mainly deals with customers in the automobile parts industry and customers conducting global business. Projects from overseas are worked on closely with the International Technical Sales Section. We will further strengthen communication by sharing information between local and overseas personnel, personnel at the International Technical Sales Section, and the staff responsible within other departments to further enhance support in China and other Asian countries. As we begin to transfer production overseas, we put forth a strong effort to foster engineers capable of supporting overseas plants.

The DMG Machining Technology Department was established in December 2011 with the goal of rapidly providing high-quality solutions for customers through close communication between full-time Gildemeister engineers and each Gildemeister plant.

In addition, to support CAM in integrated machining, multi-axis machining, and 5-axis simultaneous machining, we offer solutions tailored to customer needs by providing optimal CAMs, paths, and know-hows for test machining of whole multi-axis machines.

In the future, we will enhance personnel in the Engineering Departments in Japan and overseas so we can respond to further globalization and continue proposing new cutting technologies such as dry cutting and machining with reduced cutting force to reduce the load on the environment.

Latest Machining Technology

Mori Seiki also conducts research and development into cutting technology to improve customers’ productivity and efficiency.

**ZERO CHIP™**

Zerochip is a device that sucks and isolates a large amount of harmful dust generated during machining of graphite and CFRP (Carbon Fiber Reinforced Plastic), commonly used for aircraft parts. Zerochip provides a clean air environment for both operator and machine; it reduces time spent cleaning inside the machine and prevents operators health issues.

![Cutting with the Spinning Tool](image)

**Spinning Tool**

The Spinning Tool is an axially-loaded cutting tool that dramatically improves productivity and tool life in turning operation. By suppressing the temperature rise of the tool tip and reducing tool wear compared with conventional processes, it improves productivity up to five* times and extends tool life by up to twenty times*.

* Depending on conditions.

* The Spinning Tool was jointly developed by Kennametal Inc. and Mori Seiki.
Quality Assurance

Mori Seiki takes all factors relating to products and customers, from development to manufacturing to sales to service, as “quality”, and aims to increase the customers’ level of satisfaction. We have established a system that allows us not only to facilitate in-house processes but also to utilize customer feedback to the fullest even after delivery, thereby sending the valuable information to the relevant departments and giving customers a detailed follow-up.

In order to achieve the goals of the second medium-term management plan PQR555 that started from FY 2008, we have been working on achieving accuracy of 5 µm, improving the level of customer satisfaction, prompt action in response to product problem reports, implementation of quality inspections in design reviews, and measurement of machined parts. In the third medium-term management plan that started in 2011, GQ-C-SI 123, we will improve the quality of the entire value chain and improve machine accuracy and design with the aim of achieving a higher level of quality.

Design is an important element in product development, as there is an expression “Every outcome depends on the design.” With this in mind, we carry out durability evaluation tests on the individual machine components such as spindles, turrets, and tables at the designing stage. For new product development, we conduct tests on accuracy, durability and operability, and destructive tests to achieve a build with improved design quality. In order to prevent the occurrence of defective items and their release to later processes, we carry out strict machining accuracy checks for parts manufactured in-house. Moreover, in order not to allow the occurrence or delivery of defective parts, we conduct acceptance inspection for delivered parts, as well as giving thorough quality instructions to our suppliers. In the manufacturing processes, we implement quality auditing to determine whether or not the work is carried out in accordance with the Quality Plan Sheets (QC process tables, operation standard documents, checksheets), and we implement a 100-hour running test on all products before shipment. Immediately after delivery and acceptance, and one year after delivery, we contact each customer to survey the level of their satisfaction. We have a system for sending feedback from customers to the relevant departments through the Quality Improvement Committee so that measures can be taken immediately.

In a continuing effort to assure our customers of better quality and safety, we became certified by TÜV Rheinland Japan for the Radiation Control Process that we had introduced at our Iga, Nara No.1, No.2, and Chiba Campuses and the Isehara Office of our subsidiary, Magnescale. The purpose of the introduction of the Radiation Control Process is to eliminate the concern over possible radioactive contamination in products exported from Japan, which was raised after the Fukushima No. 1 Nuclear Plant accident in March last year. We now are more confident in providing safe and high-quality products for our customers around the world.

In order to increase the operating rate of the 180,000 Mori Seiki products that are in 67 countries worldwide, we answer customers’ inquiries with a 24-hour, 365-day-a-year system, and we have built a global maintenance service system that ships at least 97% of maintenance parts within 24 hours. We relocated the global parts center from the Iga Campus (at Iga City, Mie) to the Nara Campus No. 2 Plant (at Yamato-Koriyama City, Nara) in January 2011 to strengthen the customer support system and are now providing service to customers worldwide by working in cooperation with the parts centers in Nara, Dallas (U.S.A.), Stuttgart (Germany), Shanghai and Singapore.
Developing outstanding human resources are indispensable for quality improvement. Mori Seiki established the Mori Seiki University in order to improve the specialized skills required by each member of staff to carry out their work and management capabilities, and it is strongly promoting staff training concentrating on skills education for engineering staff and management education for management level staff. The Mori Seiki University is providing education services at four locations - Iga in Japan, Chicago in the United States, Stuttgart in Germany and Ayutthaya in Thailand - including continuous training to improve the skill and knowledge levels of Mori Seiki staff, hands-on training for overseas distributors, and various training curriculums to help customers nurture high-level machining technicians at customers.

Also to provide support for human resource development at customers, we have an unprecedented, high-quality online machine tool learning system, EOD (Education On Demand), in 8 languages including Japanese, English, German, Italian, French, Spanish, Chinese and Thai, which allows customers to learn how the machine operates and how to use it on a PC, so they can master the machine operations in advance during the period between placement of an order and delivery of the machine, enabling smooth startup after machine delivery.
CSR (Contributing to society/Protecting the environment)

1) Supporting research activities through MTTRF

MTTRF (Machine Tool Technologies Research Foundation) is a nonprofit organization recognized by the U.S. Government. It operates through contributions from companies, with Mori Seiki as its main sponsor. At Mori Seiki, various activities are done through MTTRF, such as lending machine tools to universities and research institutions in Japan as well as overseas and holding lectures at the annual general meetings.

2) Supporting the WorldSkills Competition

Mori Seiki was first named as an official Sponsor of the 39th WorldSkills competition (Numazu City, Shizuoka, Japan in 2007), and continued to serve the role in the 40th (Calgary, Canada in 2009) and the 41st WorldSkills Competition in London, United Kingdom which took place from October 5th to 8th, 2011.

At the 41st competition, we supplied 26 of the latest main products, NLX2500MC/700 high-rigidity, high-precision CNC lathes and NVXS100/40 high-precision, high-speed vertical machining centers from the X-class.

The WorldSkills competition has been held once every two years since the first competition in 1950 with objectives to improve levels of technical skill in the participating countries and regions, and promote vocational training and friendly international exchange among young engineers. Over 10,000 young engineers have competed in this event throughout its long history. In last year’s competition, approximately 1,000 young engineers who have won fierce preliminary contests in 50 countries and regions around the world took the challenge for the title of world’s best in 46 categories. During the competition, there were approximately 200,000 participants.

Mori Seiki will continue to support the provision of education for as many young engineers as possible and the improvement of their levels of technical ability in regard to machine tools.

3) DMG/MORI SEIKI Scholarship Fund

In reaction to Great East Japan Earthquake, Mori Seiki established the “DMG/MORI SEIKI Scholarship Fund” together with GILDEMEISTER aiming at providing support for education with the students at national colleges of technology in the disaster-stricken regions in June 2011, and we received a letter of appreciation from the Institute of National Colleges of Technology in Japan. We are willing to continue long-term support for young, talented people who will eventually play important roles in the Japanese manufacturing industries.
4) Cutting Dream Contest
Mori Seiki holds the “Cutting Dream Contest” every year for companies, universities, technical colleges, and research institutions, with the aim of improving and exchanging technology and techniques throughout the machining industry. We received many applicants for the 8th contest held in 2011 and exhibited the pieces and commended the award winning pieces in our latest machines exhibition show, “Innovation Days 2011” in November. This contest is held not only in Japan, but also in the U.S.A. since 2006 and in Europe since 2007, where it has also won acclaim. Mori Seiki will continue to hold this event to support the development of cutting technologies and improvement of technical skills around the world.
Innovation Days 2011 “the Next-generation Machines Show”

5) Mori Seiki Eco-Policy
1. Treat resources and energy with respect
   The use of resources such as electrical power and paper, and the use of fossil fuel energy such as heavy oil, will be reduced. Recycling and reduction of waste will be promoted.
2. Manufacture products that are environmentally-friendly
   Promote the development of environmentally-friendly products that increase the recycle rate of parts while reducing noise with the aim of reducing the use of energy and resources and to extend service lives.
3. Increase employees’ awareness of environment preservation
   All employees will be educated and trained to increase awareness and to practice environment preservation activities. All related companies are requested to do the same.
4. Environmental goals will be set and appraised periodically
   Environmental goals and results will be checked periodically and efforts will be made for continued improvements in environment management.
5. Cooperate with environmental policies as a member of society
   Laws on the environment and other related matters will be observed. Our own management standards will set and pursue satisfactory environment preservation activities.
6. The utmost will be done to make available any information on environment preservation
   We are working together as a whole company to preserve the environment.

6) Mori Seiki Energy Solution Park
Photovoltaic systems, wind power systems and secondary battery made by GILDEMEISTER were installed at Mori Seiki’s Iga Campus in order to reduce environmental load and to secure power supply in an emergency. The photovoltaic systems are a solar tracking type which can achieve 1.3 times more electrogenic capacity than a fixed type. The vertical axis wind power generator is silent, lightweight, and does not get affected by wind direction. The generated energy is stored in Redox flow batteries to provide power for EV, PHV, a part of our assembly plant offices, and disaster countermeasures offices inside the assembly plants in an emergency situation. We will continue to make efforts to reduce environmental load, while validating the potential for utilization of those green energy sources.

7) Approach to Energy Saving
We have been engaging in various energy-saving activities as the countermeasures against a possible nationwide power shortage caused by the aftermath of the Great East Japan Earthquake, and successfully reduced total electricity consumption of our three campuses by 20% compared to that in the previous year. As a result we received an honorable mention as an environmentally-friendly company, from the Japan Machine Tool Builder’s Association.
General Condition of the Market

In FY2011, the industry’s total order value released by the Japan Machine Tool Builders’ Association amounted to 1.3262 trillion yen (up 35.5% from last year), marking two-consecutive years of increase and the first total order value beyond one trillion yen in three years. The demand for machine tools rose for the second year in a row: a 37.1% increase from last year to 421.6 billion yen for domestic demand and a 34.8% increase from last year to 904.6 billion yen for foreign demand. Foreign demand that has been steadily increasing in China and North America was a driving factor for a continuous recovery in 2011. Along with demands for post-disaster reconstruction since the Great East Japan Earthquake and the Thailand flooding, the order value had been about 100 billion yen per month throughout the year. Domestic demand increased by 37.1% from last year to 421.6 billion yen, indicating a gradual increase in trend for the general machinery and automobile industries. However, the recovery in overall domestic demand was slow, and the condition for equipment investment remained severe. Foreign demand rose by 34.8% from last year to 904.6 billion yen. Demand in China which had been steadily increasing until last summer started to slow down around the mid-year due to its tight monetary policy. In Germany, investment in plant and equipment has recovered among export-related companies in the first half of the year due to euro depreciation, and Russia and Eastern Europe has also been recovering. However, Europe is the slowest in demand recovery among major three regions because of the European debt crisis triggered by the Greek government-debt crisis. In North America, brisk investment in plant and equipment among manufacturers was seen despite concerns over an economic downturn.

Outline of Business

Under these circumstances, our consolidated sales for the FY2011 ended with 155,321 million yen. In Japan, orders for machine tools have been on the rise, with the number of inquiries from the automobile industry steadily and continuously increasing. Sales were 130,668 million yen (up 27.2% from previous fiscal year) and operating profit was 4,390 million yen (previous fiscal year: 754 million yen). In the Americas, orders from a broad range of industries including the automobile, aircraft, natural resources, energy and construction machinery remained at a high level. Sales were 45,686 million yen (up 44.2% from previous fiscal year) and operating profit was 1,188 million yen (previous fiscal year: 1,245 million yen). In Europe, the number of inquiries increased steadily despite the uncertainty about the future economy associated with financial instability. Sales were 35,207 million yen (up 29.0% from previous fiscal year) and operating profit was 836 million yen (previous fiscal year: 382 million yen). In China and other Asian countries, orders mainly from the automobile industry remained on an upward trend. The number of inquiries in China increased steadily despite the concern over negative impacts of its tight monetary policy. Sales were 24,395 million yen (up 12.5% from previous fiscal year) and operating profit was 305 million yen (previous fiscal year: 37 million yen).

As for our future order environment, orders from the Americas and Asian countries as well as domestic customers are expected to continuously increase despite growing concerns over the stagnant European economy and exchange rate fluctuations. We, the Mori Seiki Group, will continue to improve the development, manufacturing, sales and service systems so that we can provide the best products and services to our customers in a timely manner, and to implement various measures to further improve our financial structure.
Current Strategic Status and Prospects

Mori Seiki has been implementing the medium-term management plan to achieve our vision, which is “to be the best partner for customers as well as a worldwide pioneer in the machine tool industry.” In our third medium-term management plan “GQ-C-SI 123” (Global Quality for Customers with Speed and Innovation 123), which covers the three-year period from FY 2011 to FY 2013, we aim to be “a company staying a step ahead with innovative solutions” as our basic policy in an effort to continuously grow while appropriately responding to a changing market environment. “GQ-C-SI” in the name of “GQ-C-SI 123” consists of each initial letter of “Global Quality for Customers with Speed and Innovation,” and “123” represents three numerical sales targets to be achieved: an operating margin of more than 10%, a 20% increase in efficiency and 30% greater market share in each region compared with FY 2011.

In order to achieve these numerical goals, we are promoting the following three strategies:

1. Establishment of Strong Plant and Sales
   We will ensure a stable supply of products and service that meet our customers’ demands and needs. At our plants, we establish the production system that is directly linked to incoming orders by steadily preparing the production schedule and managing the progress. In the first year, we achieved a monthly production capacity of 500 units. We are also establishing a new manufacturing plant in the U.S.A. where we have been achieving solid sales results, aiming to reduce lead time for our customers. The plant has begun its operation in July 2012. As for sales, we will aggressively promote to integrate our sales network with that of GILDEMEISTER, and will promptly provide optimal solutions for our customers through the collaboration with the Engineering Department and the utilization of Mori Seiki Qualified Products (MSQP).

2. Reinforcement of Collaboration with GILDEMEISTER
   Mori Seiki has been participating in a business and capital collaboration with GILDEMEISTER for three years since March 2009. We have successfully established a strong presence in the European market which is the main sales ground of GILDEMEISTER by implementing the integration of sales force of both sides this year. As for production and development, Mori Seiki and GILDEMEISTER entered into a license agreement to manufacture horizontal machining centers (a strength of Mori Seiki), and 5-axis machining centers (a strength of GILDEMEISTER) at each production site with the aim of improving production efficiency. We will continue to develop high quality products that satisfy our customers by concentrating our management resources on each specialty area.

3. Creation of Unparalleled Product Quality
   We are making every effort to improve quality and to increase customer reliability. We aim to bring joy and satisfaction to our customers not only though specifications, functions, external appearances of our products, but also through our satisfactory customer services including prompt inquiry response and actions to meet their needs. Each and every organization and employee of the Mori Seiki Group is committed to achieve our top-priority goal which is to “improve product quality and reliability year by year.”
Machine tools which enrich your life

Most of the components, dies and molds which make up many industrial products such as automobiles, trains and mobile phones that we take for granted in our daily lives are manufactured by machine tools. And the industrial machines themselves, which assemble parts into various products, are also produced by machine tools. Machine tools are referred to as "mother machines," or sources of all machines because of their role: "machines which make machines." It is no exaggeration to say that machine tools make our lives convenient.

Mori Seiki's Products

CNC lathes

The lathe, which is based on the principle of the potter's wheel, rotates a workpiece (material) attached to the spindle and performs cutting by placing a cutting tool against the workpiece. This is a representative model of machine tools and is the starting point for Mori Seiki's machine tools. Mori Seiki started manufacture and sale of high-speed precision lathes in 1958 and started manufacture and sale of numerically controlled machine tools (CNC lathes) in 1966. Since then, we have delivered over 100 different models of lathes.

Machining centers

Machining centers use rotary tools that are attached to the spindle, and perform machining for a great variety of workpieces from round and rectangular items to complex shapes that are mounted on the table driven at high speeds. These are equipped with the Automatic Tool Changer (ATC) and can handle a wide range of machining from chamfering, drilling, boring and tapping. They are divided into vertical and horizontal types according to differences in the orientation of the spindle and the drive axis.

Multi-axis machines

This machine features the integration of the turning function for lathes and milling for machining centers. It is equipped with the combination of our original technology, including thorough measures against thermal displacement and equipping of the 3D interference check function as standard.

Application systems

We have a wide range of application systems that increase customers’ productivity and efficiency; the MAPPS IV high-performance operating system that combines the best hardware in the industry and advanced application/network systems to achieve maximum ease of use; as well as the MORI-AP Series of the automatic conversational programming systems.
About Mori Seiki (Corporate Profile / As of 31st March, 2012)

## Highlights Of The Year

The following are Mori Seiki's major topics during the Fiscal Year 2011.

- **2012**
  - December
  - Established Mori Seiki Renewable Energy Co., Ltd.
  - Opened the DMG/MORI SEIKI USA Houston Technical Center
  - Released the simultaneous 5-axis NC cutting simulation
  - Started accepting orders for DMU 60 eVo and LASERTEC 210 Shape, 5-axis control machining centers
- **2011**
  - October
  - Established Mori Seiki Sales and Service Co., Ltd. for domestic sales and service
  - Started accepting orders for CL2000E and CL2000TE, compact CNC lathes
  - Acquired Certification of Radiation Monitoring and Control Process
  - Started accepting orders for NVL1350T and NVL1350MC, large vertical lathes
  - Held the Innovation Day 2011 “The Next-Generation Machines Show” at Iga Campus
  - Changed the name of Akishino Mold Laboratory, Ltd. to Mori Seiki Mold Laboratory, Ltd.
  - Started accepting orders for DMU 65 monoBLOCK and LASERTEC 65 Shape, 5-axis control machining centers
  - Established the Shanghai Solution Center
  - Started accepting orders for NHX8000, a high-rigidity large horizontal machining center
  - The Awards Ceremony for the 8th Cutting Dream Contest
  - Started accepting orders for MILLTAP 700, the next-generation compact machining center jointly developed with GILDEMEISTER AG
  - Equipped SIEMENS NC on NMV5000 DCG
  - Started accepting orders for NVL1350T and NVL1350MC, large vertical lathes

Results Summary (Net Sales)

Sales Trends by Geographical Segment
In Japan, 55,078 million yen ($670,620 thousand) increased by 23.7% from the previous year.
In the Americas, 44,037 million yen ($536,186 thousand) increased by 48.3% from the previous year.
In Europe, 33,379 million yen ($406,417 thousand) increased by 28.8% from the previous year.
In China and Asia, 22,827 million yen ($277,937 thousand) increased by 12.5% from the previous year.

Sales to Third Parties
Sales to Third Parties based on the reportable segments in accordance with the new accounting standard which is applied for the year ended 31st March, 2012 are summarized as follows:

Results Summary (Financial Situation)

Assets, liabilities and net assets

- Assets
  Current assets decreased by 0.2% compared to the previous fiscal year to 86,029 million yen ($1,047,473 thousand). Fixed assets increased by 15.9% compared to the previous fiscal year to 99,390 million yen ($1,210,155 thousand). That was mainly because investments in securities increased by 12,939 million yen ($157,547 thousand). As a result, total assets increased by 7.8% compared to the previous fiscal year to 185,419 million yen ($2,257,628 thousand).

- Liabilities
  Current liabilities decreased by 19.9% compared to the previous fiscal year to 53,094 million yen ($646,463 thousand). That was mainly because short-term bank loans decreased by 16,394 million yen ($199,610 thousand). Fixed liabilities increased by 264.5% compared to the previous fiscal year to 37,607 million yen ($457,896 thousand). That was mainly due to an increase of 30,000 million yen ($365,275 thousand) in Bonds payable. As a result, total liabilities increased by 18.4% compared to the previous fiscal year to 90,701 million yen ($1,104,359 thousand).

- Net assets
  Total net assets decreased by 0.6% compared to the previous fiscal year to 94,718 million yen ($1,153,269 thousand). The major reason for the decrease was that of 3,343 million yen ($40,704 thousand) in translation adjustments, we paid cash dividend of 2,212 million yen ($26,933 thousand) while posting a net income of 5,620 million yen ($68,428 thousand) and increase of 1,197 million yen ($14,575 thousand) in treasury stock.

Results Summary (Cash flow)

Cash flow
Cash and cash equivalents at the end of the fiscal year 2011 were 4,533 million yen ($55,193 thousand), a decrease of 2,881 million yen ($35,079 thousand) from the previous fiscal year.

Cash flows from operating activities
Net cash provided in operating activities was 8,617 million yen ($104,919 thousand: 10,240 million yen was used in the previous fiscal year).
The main increasing factors are 6,702 million ($81,602 thousand) and 7,185 million yen ($87,483 thousand) income before income taxes and minority interests and depreciation and amortization, and 1,461 million yen ($17,789 thousand) decrease in accounts receivable. The main decreasing factors are an increase in inventories respectively of 8,369 million yen ($101,899 thousand) and 3,257 million yen ($39,657 thousand) decrease in gain on charge in investments in subsidiaries.

Cash flows from investing activities
Net cash used in investing activities was 22,080 million yen ($268,842 thousand: 14,055 million yen was used in the previous fiscal year). This is mainly due to proceeds from transfer of business of 1,132 million yen ($13,783 thousand), purchase of stocks of subsidiaries and affiliates of 11,655 million yen ($141,909 thousand), and purchase of tangible fixed assets of 8,209 million yen ($99,951 thousand).

Cash flows from financing activities
Net cash provided in financing activities was 10,873 million yen ($132,388 thousand: 24,107 million yen was provided in the previous fiscal year). The main decreasing reason is net decrease in short-term bank loans of 16,394 million yen ($199,610 thousand) and cash dividends of 2,212 million yen ($26,933 thousand).

Total depreciation and amortization for the fiscal year 2011 was 7,185 million yen ($87,483 thousand), increased by 13 million yen ($158 thousand). Furthermore, total amount of investments in property, plant and equipment was 9,500 million yen ($115,670 thousand) mainly because of construction such as a new machining plant in Japan, partial renewal and enhancement of productive equipments.

Corporate Governance

(1) Basic Concept for Corporate Governance

In order to increase the transparency of management for shareholders, investors, and society as a whole, including business partners, employees and local communities; and to ensure fair, effective corporate management, Mori Seiki has identified the reinforcement of its corporate governance and the strengthening of its management oversight functions as its top priority.

We will continue to improve our corporate values for long-term stability, and will endeavor to ensure that our business activities are rooted in an even greater sense of corporate ethics.

(2) Outline of the system of corporate governance, and reason for adopting the system of corporate governance

Mori Seiki has adopted an auditing system.

As of 15th June, 2012, the Board of Directors consists of five Directors and the Board of Auditors consists of three auditors, two of whom are external auditors.

The Board of Directors meets regularly and whenever necessary to debate important management issues, and to make decisions through lively discussions in which directors state their opinions freely. Also, by making the term served by Board members to one year, we have a system in which the mission and responsibilities of the Directors are made clear. We instituted Management Councils with the President as Chairman in 2006, and Operating Directors’ Meetings in 2009 to speed up the decision-making process and to improve the soundness of our administration. In addition, Management Meetings attended by the Directors, Operating Directors and General Managers are convened once a month to completely share and manage the progress on important issues and basic strategies, strengthening the corporate governance of the Group as a whole.

In recent years, international concern about measures to prevent the proliferation of weapons of mass destruction and the excess stockpiling of conventional weapons has been growing. To address this, the Mori Seiki Group has set up an Export Control Committee, with the President as chairperson. This committee formulates the internal regulations (Compliance Program), reviews and changes the contents of the regulations to ensure compliance with export control laws, and conducts rigorous discussions on matters such as the propriety of exports of our products.

In 2005, as part of the establishment of our internal control system, we established an Information Disclosure Control Committee, with the Executive Officer of the Administrative HQ as its chairperson, which acts as an advisory body to decide rules for the disclosure of information, in order to improve the transparency and soundness of our management.

In accordance with the auditing policy, the auditors attend meetings of the Board of Directors, Operating Directors’ Meetings, Management Meetings and other key meetings, where they express their opinions. In addition to this, they peruse documents about important decisions, and conduct strict audits in every department at the Head Office, as well as each Campus, Technical Center and consolidated Group company.

Through this process we have sought to achieve a fast decision-making process with a small number of Directors and energize the Board of Directors, we have revamped our management by, for example, establishing a compliance system, and we have established an efficient corporate governance system with an increased level of fairness and transparency in management.

The corporate governance system of Mori Seiki is as follows.
(3) Maintenance of an internal control system and risk management system

Mori Seiki implements the following “Basic Policy on Internal Controls” decided by the Board of Directors.

- A system to ensure that the business conduct of Directors and employees conforms to all relevant laws and articles.

Mori Seiki clarifies the criteria for the actual behavior of its Directors, Operating Directors and managerial staff through the mission statement, the 10 tenets of the “Mori Seiki Way”, the employee handbook, the export control program, and all of the codes of conduct, stipulations and rules relating to the environment, occupational health and safety, quality management systems and so on.

We have established a Management Council chaired by the President, and this council serves as a mechanism for putting these behavioral codes of conduct in order, promoting compliance, educating the managerial staff, and taking cross-sectional control.

We deal undaunted as an organization with organized violence by antisocial groups, and the basic policy behind our approach is to eradicate antisocial power.

- A system for the storage and management of information concerning the business conduct of Directors

Mori Seiki manages and saves the information on daily decision making and business conduct obtained through the minutes of general meetings of shareholders, the minutes of Board of Directors Meetings, the minutes of Management Councils, the minutes of Operating Directors’ Meetings, the minutes of Management Meetings, and the internal electronic decision-making system. The Directors and Auditors can view this information either in document form or in electromagnetic media at all times.

We have provided “regulations on the storage and management of information concerning the business conduct of Directors”, and have clarified the system for the storage and management of information concerning business conduct.
Corporate Governance

- Regulations to manage risks of loss, and other systems
  Mori Seiki practices environmental/occupational health and safety/quality risk management in accordance with a management system, risk management relating to the reliability of financial reports, risk management in accordance with the export control program, and risk management in daily business in accordance with the internal electronic decision-making system.
  We established a Management Council chaired by the President, where the President appoints the Director with overall responsibility and the Director with responsibility in each category, and we are working to build a system where this council comprehensively and generally manages risk throughout the Group as a whole.

- A system to ensure that the Directors' business is conducted efficiently
  Mori Seiki seeks to make the conduct of the Directors' business more efficient by using the following business management system. We have also introduced an Operating Director system in order to support Directors and facilitate fast decision making and efficient conduct of business.
  1) Fast decision making using the internal electronic decision-making system
  2) Reports on conduct of Directors, Operating Directors and executives in Board of Directors Meetings, Management Councils, Operating Directors' Meetings and Management Meetings and monitoring of the execution of duties by Auditors
  3) Drafting the medium-term management plan according to Board of Directors Meetings, Management Councils, Operating Directors' Meetings and Management Meetings, setting the business result targets and budgets for each operating department based on the medium-term management plan, and implementing business result management on a monthly and quarterly basis by utilizing IT
  4) Reviewing business results on a monthly basis through Board of Directors Meetings, Management Councils, Operating Directors' Meetings and Management Meetings, and implementing strategies for improvement

- A system to ensure that the corporate group consisting of Mori Seiki and its affiliated companies conducts business in an appropriate manner
  Mori Seiki ascertains and assures the propriety of the business of its subsidiaries and affiliates through the internal electronic decision-making system, use of the weekly report system and various scheduled meetings on a consolidated basis, regular and random visits by the President and responsible Directors, and periodic internal auditing of subsidiaries.
  With Mori Seiki's Administrative HQ and Accounting/Finance HQ as the departments responsible for the internal control of the Group, we are making progress with consultation and sharing information about internal controls among Mori Seiki and each of the companies in the group, and building a constitution, including systems for efficiently transmitting directions and requests.

- Matters concerning employees who were appointed by auditors to assist them with their duties and the independence of these employees from Directors
  Mori Seiki currently has one staff member assisting the Auditors. Personnel changes, evaluations, etc. of the assisting staff member must be agreed to by the Auditors, and exchanges of opinions with Auditors are held periodically in order to achieve a system in which the audits are more effective and in which their independence is assured.

- A system in which Directors and employees report to the auditors, and systems for other reports to the auditors
  At Mori Seiki, the Auditors attend important regular meetings including the Board of Directors Meetings, Management Councils, Operating Directors' Meetings, and Management Meetings, listen to the decisions and reports, and, if necessary, request a report from the Directors, Operating Directors or managerial staff. The Directors, Operating Directors and managerial staff must immediately report any fact that could significantly harm the company to the Board of Auditors or the Auditors upon discovery of the fact, and the “regulations to ensure effectiveness of audits conducted by the Auditors” have been prepared to make the details of these regulations clear. It shall also be understood that the Board of Auditors, or the Auditors, can request reports from the Directors, Operating Directors or managerial staff.
- A system to ensure that other audits conducted by the Auditors are carried out effectively

At Mori Seiki, the Board of Auditors, or the Auditors, have regular and temporary exchanges of opinion with both the President and the Accounting Auditors.

We will continue to maintain this system as we look ahead.

(4) Status of the internal audit and the audit conducted by the Auditors

As part of our internal audit, we have set up an Internal Auditing Department with three full-time working staff, under the direct supervision of the President, which checks that the business operations of the Mori Seiki Group are conducted appropriately and effectively. Regarding our adoption of a system of internal control and reporting (with reference to the “J-SOX” Act, Japan’s equivalent of the Sarbanes-Oxley Act), we established the J-SOX Section in the Internal Auditing Department in October 2005 prior to the approval of the bill, promoted the construction of an internal control system, and we have already completed preparations for reliably operating this system within the Group both in Japan and overseas.

With regard to the audit conducted by the Auditors, currently the Board of Auditors is comprised of one Corporate Auditor and two External Auditors who attend the Board of Directors Meetings, Operating Directors’ Meetings and Management Meetings in accordance with the policy determined by the Board of Auditors and the auditing plan, and hear the status of execution of relevant work from the Directors, Operating Directors, Internal Auditing Department and so on. They also peruse documents about important decisions, and examine the status of work and assets in every department at the Head Office, as well as each Campus, Technical Center and consolidated Group company.

The Auditors provide guidance for and auditing of the Directors on matters involving corporate governance, compliance, risk management, and overall business management.

The Auditors and the Internal Auditing Department cooperate closely with each other, and the Internal Auditing Department provides the Auditors with regular reports about the status of internal controls.

The Auditors, Internal Auditing Department, and Accounting Auditors make conscientious effort in conducting proper and strict accounting audits by holding meetings every quarter and whenever necessary to actively exchange their opinions and information.

(5) External Directors and External Auditors

Mori Seiki has two External Auditors.

The External Auditors have no special financial interest in relation to Mori Seiki, whether in terms of personal/business relations, trade or otherwise, and maintain a highly independent status.

Each of the External Auditors debate and decide the auditing policy, the auditing plan, the auditing method, and the allocation of duties, in the Board of Auditors in cooperation with the Corporate Auditor, and auditing is implemented throughout the year based on this. They also exchange opinions regularly with the top management and Directors, and conduct audits by visiting actual sites such as plants and group companies. Information is shared with the Accounting Auditor by holding regular meetings.

Mori Seiki has sought to secure a robust auditing system with a team of three Auditors including two External Auditors, and has strengthened monitoring of the management functions. The two External Auditors are designated as Independent Directors, and in our judgment implementing the auditing from an independent and fair standpoint by External Auditors gives us a governance system that functions adequately to secure objectivity and neutrality without appointing External Directors. Therefore, we are maintaining the present system.

Notes to Consolidated Financial Statements 31st March, 2012

1. Basis of Preparation of Consolidated Financial Statements
Mori Seiki Co., Ltd. (the “Company”) and its domestic consolidated subsidiaries maintain their accounts and records in accordance with accounting principles generally accepted in Japan. Its overseas consolidated subsidiaries maintain their accounts and records in conformity with the requirements of their respective countries of domicile.

The accompanying consolidated financial statements have been prepared on the basis of accounting principles generally accepted in Japan, which are different in certain respects as to the application and disclosure requirements of International Financial Reporting Standards, and have been compiled from the consolidated financial statements prepared by the Company as required by the Financial Instruments and Exchange Act of Japan.

In preparing the accompanying financial statements, certain reclassifications and rearrangements have been made to the consolidated financial statements issued in Japan in order to present them in a format which is more familiar to readers outside Japan. In addition, the notes to the consolidated financial statements include information which is not required under accounting principles generally accepted in Japan but is presented herein as additional information.

Certain reclassifications of previously reported amounts have been made to the consolidated statement of cash flows for the year ended 31st March, 2011 to conform it to the 2012 presentation.

The accompanying consolidated financial statements have been translated from yen amounts into U.S. dollar amounts, solely for convenience, as a matter of arithmetic computation only, at ¥82.13 = U.S.$1.00, the exchange rate prevailing on 31st March, 2012. This translation should not be construed as a representation that yen have been, could have been, or could in the future be, converted into U.S. dollars at the above or any other rate.

2. Summary of Significant Accounting Policies
(1) Principles of consolidation
The accompanying consolidated financial statements include the accounts of the Company and significant subsidiaries over which substantial control is exerted through either majority ownership of voting stock and/or by other means. In addition, significant affiliates over which substantial control is significantly affected by the consolidated group in various ways have been accounted for by the equity method. All significant intercompany balances and transactions have been eliminated in consolidation.

For consolidation purposes, the financial statements of seven consolidated subsidiaries whose fiscal year end date differ from that of the Company have been included in consolidation on the basis of a full fiscal year, for the year ended 31st March. One subsidiary’s fiscal year end is 30th September and that of the other six subsidiaries is 31st December.

Among those equity-method affiliates whose fiscal year end date differs from that of the Company, year-end financial statements are used for four affiliates and the provisional interim closing financial statements as of the Company’s fiscal year end date are used for one affiliate.

(2) Foreign currency translation
Receivables and payables denominated in foreign currencies are translated into yen at the rates of exchange in effect at the balance sheet date. Gain or loss resulting from such translation adjustments is credited or charged to income as incurred. The balance sheet accounts of the overseas consolidated subsidiaries have been translated into yen at the rates of exchange in effect at the balance sheet date, except for the components of net assets excluding minority interests which have been translated at their historical rates.

The differences resulting from translation are presented as components of net assets in the accompanying consolidated balance sheets. Revenues, expenses and cash flows are translated at the average rates for the year.

(3) Cash and cash equivalents
For the purpose of the consolidated statements of cash flows, cash and cash equivalents consist of cash on hand, deposits with banks withdrawable on demand, and short-term investments which are readily convertible to cash subject to an insignificant risk of any changes in their value and which were purchased with an original maturity of three months or less.

(4) Allowance for doubtful receivables
The allowance for doubtful receivables is calculated based on
The actual historical ratio of bad debts and an estimate of certain uncollectible amounts determined after an analysis of specific individual receivables.

(5) Marketable securities and investments in securities
The accounting standard applicable to financial instruments requires that securities be classified into three categories: trading securities, held-to-maturity debt securities or other securities.
Trading securities are carried at market value, and gain or loss, both realized and unrealized, is credited or charged to income.
Held-to-maturity debt securities are carried at amortized cost.
 Marketable securities classified as other securities are carried at market value with any changes in unrealized holding gain or loss, net of the applicable income taxes, reported as a separate component of net assets. Non-marketable securities classified as other securities are carried at cost. Cost of securities sold is determined principally by the moving average method.
Investments in investment limited partnerships are stated at the net value of equities based on the most recent financial statements available prepared according to the financial reporting dates specified in the respective partnership agreements.

(6) Derivatives
Derivatives are stated at fair value.

(7) Inventories
Merchandise, finished goods and work-in-process of the Company and its domestic consolidated subsidiaries are stated at lower of cost or net selling value, cost being determined by the gross average method.
Merchandise, finished goods and work-in-process of overseas consolidated subsidiaries are stated at lower of cost or net selling value, cost being determined by the first-in, first-out method.
Raw materials are stated at lower of cost or market value, cost being determined by the moving average method.
Supplies are stated at lower of cost or market value, cost being determined by the last purchase price method.

(8) Property, plant and equipment (Other than leased assets)
Depreciation of property, plant and equipment of the Company and its domestic consolidated subsidiaries, except for buildings (other than structures attached to the buildings) acquired on or subsequent to 1st April, 1998, is calculated by the declining-balance method over the estimated useful lives of the respective assets.
Depreciation of buildings (other than structures attached to the buildings) of the Company and its domestic consolidated subsidiaries acquired on or subsequent to 1st April, 1998 is calculated by the straight-line method. Depreciation of property, plant and equipment of the overseas subsidiaries is calculated by the straight-line method.
The estimated useful lives of property, plant and equipment are summarized as follows:
- Buildings and structures 7 to 50 years
- Machinery, equipment and vehicles 2 to 17 years

(9) Research and development costs and computer software
(Other than leased assets)
Research and development costs are charged to income when incurred.
Expenditures relating to software developed for internal use are charged to income when incurred unless these contribute to the generation of future income or cost savings. Such expenditures are capitalized as assets and amortized by the straight-line method over the useful life of the software, generally 5 years.
Expenditures relating to software developed for sales in the market are capitalized as assets and amortized by the straight-line method over the prospective sales period, generally 3 years.

(10) Leased assets
Leased assets under finance lease contracts that transfer ownership to the lessee are depreciated by the same depreciation methods as applied to equivalent assets owned by the Company and its consolidated subsidiaries using the economic useful lives of the leased assets.
Leased assets under finance lease contracts that do not transfer ownership to the lessee are depreciated to the residual value of zero by the straight-line method using the terms of the contracts as the useful lives.
Finance lease transactions commencing on or before 31st March, 2008 other than those in which the ownership of the leased assets is transferred to the lessee are accounted for in the same manner as operating leases.
(11) Goodwill
Goodwill is amortized by the straight-line method over periods ranging from 5 to 10 years.

(12) Bond issuance cost
Bond issuance cost is charged to income as incurred.

(13) Income taxes
Deferred income taxes are recognized by the asset and liability method. Under the asset and liability method, deferred tax assets and liabilities are determined based on the differences between financial reporting and the tax bases of the assets and liabilities and are measured using the enacted tax rates and laws which will be in effect when the differences are expected to reverse.

(14) Allowance for product warranties
Allowance for product warranties is calculated based on the actual historical ratio of repair costs per corresponding product sales, to provide for future repairs during free charge product warranty periods.

(15) Allowance for bonuses to employees
For two domestic consolidated subsidiaries, allowance for bonuses to employees are provided for based on the estimated amount to be paid to employees after the balance sheet date for their services rendered during the current period.

(16) Allowance for bonuses to directors and corporate auditors
Allowance for bonuses to directors and corporate auditors is calculated based on the estimated amount of bonuses to be paid to directors and corporate auditors in the Company and one domestic consolidated subsidiary.

(17) Accrued retirement benefits
Accrued retirement benefits is calculated based on the estimated amount of the retirement benefit obligation and the fair value of the pension plan assets at 31st March, 2012 and 2011 to provide retirement benefits for employees in certain overseas consolidated subsidiaries.

Actuarial gain or loss is amortized by the straight-line method over a certain period within the average remaining years of service, mainly nine years, of the eligible employees.

In addition to the above, the plan assets of a multi-employer pension plan covering all employees in which certain of the Company’s domestic subsidiaries participate are partially irrecoverable. As a result, one domestic consolidated subsidiary expects to provide an additional contribution to the pension plan and recorded a certain amount of additional accrued retirement benefits at 31st March, 2012 based on an estimate of the associated loss on their plan assets.

(18) Hedge accounting
Gain or loss on derivatives designated as hedging instruments is deferred until the gain or loss on the underlying hedged items is recognized.

The Company uses forward foreign exchange contracts principally in order to manage certain risks arising from fluctuations in foreign exchange rates. The Company evaluates the effectiveness of its hedging activities by comparing cumulative changes in cash flows on the hedging instruments with those of the related hedged items.

Hedging instruments: Forward foreign exchange contracts
Hedged items: Forecasted transactions in foreign currencies

(19) Consolidated taxation system
Effective the year ended 31st March, 2012, the Company and certain domestic consolidated subsidiaries have adopted the consolidated taxation system.

3. Supplemental Information
Accounting standards for accounting changes and error corrections
Effective the year ended 31st March, 2012, the Company and its domestic consolidated subsidiaries have adopted “Accounting Standard for Accounting Changes and Error Corrections” (Accounting Standards Board of Japan (“ASBJ”) Statement No.24 issued on 4th December, 2009) and “Guidance on Accounting Standard for Accounting Changes and Error Corrections” (ASBJ Guidance No.24 issued on 4th December, 2009).
Notes to Consolidated Financial Statements 31st March, 2012

4. Cash and Cash Equivalents
In the presentation of the consolidated statements of cash flows, the relationship between the items included in cash and cash equivalents and the corresponding amounts reflected in cash and cash deposits in the consolidated balance sheets at 31st March, 2012 and 2011 is summarized as follows:

<table>
<thead>
<tr>
<th></th>
<th>Millions of yen</th>
<th>Thousands of U.S. dollars</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>

</tbody>
</table>

The Company recorded loss on revaluation of investments in securities of ¥201 million ($2,447 thousand) and ¥497 million on marketable equity securities classified as other securities for the years ended 31st March, 2012 and 2011, respectively.

A loss is recorded when the market value of a security declines by 50% or more from its acquisition cost, or when market value declines by 30% or more, but less than 50%, if the decline is deemed to be irrecoverable individually.

(Supplemental information)
In prior years, when the market value of other securities with a quoted market price declined by 30% or more from their acquisition cost, a loss had been recorded. However, a loss was recorded for the year ended 31st March, 2012 as a result of a consideration of the recoverability of individual securities when the market value of the other securities declined by 30% or more but less than 50% from their acquisition cost due to the necessity of more conservative considerations of recoverability of market value as volatility in equity markets has emerged related to changes in the current economic environment. The effect of this change on operating results was nil for the year ended 31st March, 2012.

7. Loss on Impairment of Property, Plant and Equipment
Loss on impairment of property, plant and equipment was recorded for the year ended 31st March, 2012 related to the following assets:

<table>
<thead>
<tr>
<th>Company</th>
<th>Location</th>
<th>Classification</th>
<th>Millions of yen</th>
<th>Thousands of U.S. dollars</th>
</tr>
</thead>
<tbody>
<tr>
<td>Taiyo Koki Co., Ltd.</td>
<td>Nagaoaka City, Niigata Prefecture, Japan</td>
<td>Land, buildings and others</td>
<td>¥ 4</td>
<td>$ 49</td>
</tr>
</tbody>
</table>

In June 2009, Taiyo Koki Co., Ltd., a domestic consolidated subsidiary, recognized a loss on impairment of land, buildings and others originally acquired as parts storage but which became idle assets as they were not expected to be used in the future. Taiyo Koki Co., Ltd. remeasured the fair value at 31st March, 2012 and recognized an additional loss on impairment. Such idle assets were grouped individually making the head office and the factory, including sales offices, as one unit. Recoverable amounts on land, buildings and others are measured at net selling value based on the appraisal value.

There was no loss on impairment of property, plant and equipment recorded for the year ended 31st March, 2011.
8. Retirement Benefits

The Company and seven domestic consolidated subsidiaries have established an employees’ defined contribution pension plan. In addition to the above, two domestic consolidated subsidiaries participate in a small- and medium-sized enterprise mutual aid plan and a multi-employer pension plan covering all of their employees and other. Furthermore, certain overseas consolidated subsidiaries have established a defined benefit plan, a benefit plan for a lump-sum payment, or an employees’ defined contribution pension plan.

Since the portion of pension assets belonging to a multi-employer pension plan could not be reasonably calculated, the required contribution amount is recognized as retirement benefit expenses. The multi-employer pension plan’s pension assets, which are calculated based on the proportion of contributions to the pension plan made by subsidiaries, amounted to ¥869 million ($10,581 thousand) and ¥876 million at 31st March, 2012 and 2011, respectively.

The following table sets forth the funded and accrued status of the retirement benefit plans for employees and the amounts recognized in the accompanying consolidated balance sheets at 31st March, 2012 and 2011 for the defined benefit pension plans of certain consolidated subsidiaries:

<table>
<thead>
<tr>
<th></th>
<th>Millions of yen</th>
<th>Thousands of U.S. dollars</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) Retirement benefit obligation</td>
<td>¥ (1,409)</td>
<td>$ (17,156)</td>
</tr>
<tr>
<td>(2) Plan assets at fair value</td>
<td>928</td>
<td>8,084</td>
</tr>
<tr>
<td>(3) Unfunded retirement benefit obligation = (1) + (2)</td>
<td>(481)</td>
<td>(5,857)</td>
</tr>
<tr>
<td>(4) Unrecognized actuarial loss</td>
<td>227</td>
<td>2,764</td>
</tr>
<tr>
<td>(5) Accrued retirement benefits = (3) + (4)</td>
<td>¥ (254)</td>
<td>$ (3,093)</td>
</tr>
</tbody>
</table>

In addition to the above, Taiyo Koki Co., Ltd., a domestic consolidated subsidiary, recognized an additional retirement benefit obligation of ¥88 million ($1,071 thousand) for its estimated proportional liability as a result of the pension assets of a multi-employer pension plan in which it participates being partially irrecoverable at 31st March, 2012.

The Company and other consolidated subsidiaries did not record such additional obligation.

The retirement benefit expenses for the years ended 31st March, 2012 and 2011 are summarized as follows:

<table>
<thead>
<tr>
<th></th>
<th>Millions of yen</th>
<th>Thousands of U.S. dollars</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) Service cost</td>
<td>¥ 86</td>
<td>$ 1,047</td>
</tr>
<tr>
<td>(2) Interest cost</td>
<td>25</td>
<td>304</td>
</tr>
<tr>
<td>(3) Expected return on plan assets</td>
<td>(29)</td>
<td>(353)</td>
</tr>
<tr>
<td>(4) Contributions to the pension plan</td>
<td>847</td>
<td>10,314</td>
</tr>
<tr>
<td>(5) Contributions to the multi-employer pension plan</td>
<td>40</td>
<td>487</td>
</tr>
<tr>
<td>Total</td>
<td>¥ 994</td>
<td>$ 12,103</td>
</tr>
</tbody>
</table>

In addition to the above, Taiyo Koki Co., Ltd., a domestic consolidated subsidiary, recognized additional retirement benefit expenses of ¥88 million ($1,071 thousand) for its estimated proportional cost as a result of pension assets of a multi-employer pension plan in which it participates being partially irrecoverable. These were recorded as a component of other expenses for the year ended 31st March, 2012.

The Company and other consolidated subsidiaries did not record such additional expenses.

The assumptions used in accounting for the retirement benefit obligation for the years ended 31st March, 2012 and 2011 are summarized as follows:

<table>
<thead>
<tr>
<th></th>
<th>2012</th>
<th>2011</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) Discount rates</td>
<td>2.80%</td>
<td>3.00%</td>
</tr>
<tr>
<td>(2) Expected rates of return on plan assets</td>
<td>3.50%</td>
<td>4.00%</td>
</tr>
</tbody>
</table>

Estimated benefits are allocated by the straight-line method.
9. Short-Term Bank Loans and Long-Term Debt

Short-term bank loans consist of bank overdrafts and loans under commitment lines. The weighted-average interest rates on short-term bank loans were 0.40% and 0.44% at 31st March, 2012 and 2011, respectively.

For effective financing purposes, the Company and two domestic consolidated subsidiaries concluded committed bank overdraft agreements with three banks at 31st March, 2012 and 2011. The status of such agreements at 31st March, 2012 and 2011 is summarized as follows:

<table>
<thead>
<tr>
<th></th>
<th>Millions of yen</th>
<th>Thousands of U.S. dollars</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lines of credit</td>
<td>16,050</td>
<td>$195,422</td>
</tr>
<tr>
<td>Bank overdrafts utilized</td>
<td>(5,828)</td>
<td>(70,961)</td>
</tr>
<tr>
<td>Available credit</td>
<td>10,222</td>
<td>$124,461</td>
</tr>
</tbody>
</table>

For effective financing purposes, the Company concluded committed line-of-credit agreements with 22 banks at 31st March, 2012 and 2011. The status of such agreements at 31st March, 2012 and 2011 is summarized as follows:

<table>
<thead>
<tr>
<th></th>
<th>Millions of yen</th>
<th>Thousands of U.S. dollars</th>
</tr>
</thead>
<tbody>
<tr>
<td>Committed lines of credit</td>
<td>50,000</td>
<td>$608,791</td>
</tr>
<tr>
<td>Short-term loans utilized</td>
<td>(22,950)</td>
<td>(279,435)</td>
</tr>
<tr>
<td>Available credit</td>
<td>27,050</td>
<td>$329,356</td>
</tr>
</tbody>
</table>

Long-term debt at 31st March, 2012 and 2011 consisted of the following:

<table>
<thead>
<tr>
<th></th>
<th>Millions of yen</th>
<th>Thousands of U.S. dollars</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bonds</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Zero coupon yen convertible bonds with stock acquisition rights due 2015</td>
<td>2,583</td>
<td>$31,450</td>

</tr>
<tr>
<td>Less current portion</td>
<td>(2,917)</td>
<td>(35,517)</td>
</tr>
<tr>
<td>Long-term debt, net</td>
<td>33,882</td>
<td>$412,542</td>
</tr>
</tbody>
</table>

The aggregate annual maturities of long-term debt subsequent to 31st March, 2012 are summarized as follows:

<table>
<thead>
<tr>
<th>Year ending 31st March,</th>
<th>Millions of yen</th>
<th>Thousands of U.S. dollars</th>
</tr>
</thead>
<tbody>
<tr>
<td>2013</td>
<td>2,917</td>
<td>$35,517</td>
</tr>
<tr>
<td>2014</td>
<td>353</td>
<td>4,298</td>
</tr>
<tr>
<td>2015</td>
<td>15,325</td>
<td>186,765</td>
</tr>
<tr>
<td>2016</td>
<td>246</td>
<td>2,995</td>
</tr>
<tr>
<td>2017</td>
<td>15,189</td>
<td>184,939</td>

<tr>
<td>Total</td>
<td>36,799</td>
<td>$448,059</td>
</tr>
</tbody>
</table>

On 13th June, 2005, the Company issued ¥11,615 million of zero coupon yen convertible bonds with stock acquisition rights. An outline of these bonds is as follows:

- **Type of shares to which stock acquisition rights apply**: Common stock of the Company
- **Issue price of stock acquisition rights**: Nil
- **Exercise price of stock acquisition rights**: ¥1,312.3
- **Principal amount of bonds in the aggregate**: ¥11,615 million
- **Total amount of the shares issued upon exercise of stock acquisition rights**: ¥9,006 million
- **Exercisable period**: 27th June, 2005 to 29th May, 2012

Exercise of stock acquisition rights shall be deemed as payment by the bondholders of the full amount required to be paid upon exercise of the stock acquisition rights, rather than as redemption of the bond at its face value.
**10. Income Taxes**

Income taxes in Japan applicable to the Company and its domestic consolidated subsidiaries consist of corporation tax, inhabitants’ taxes and enterprise taxes which, in the aggregate, resulted in a statutory tax rate of approximately 40.49% for the years ended 31st March, 2012 and 2011.

The overseas subsidiaries are subject to the income tax regulations of the respective countries in which they operate.

The reconciliation of the differences between the statutory tax rate and effective tax rates for the years ended 31st March, 2012 and 2011 as a percentage of income before income taxes and minority interests is as follows:

<table>
<thead>
<tr>
<th>Differences resulting from:</th>
<th>2012</th>
<th>2011</th>
</tr>
</thead>
<tbody>
<tr>
<td>Permanent non-deductible expenses</td>
<td>4.19</td>
<td>20.22</td>

</tbody>
</table>
Following the promulgation on 2nd December, 2011 of the “Act for Partial Revision of the Income Tax Act, etc. for the Purpose of Creating Taxation System Responding to Changes in Economic and Social Structures” (Act No.114 of 2011) and the “Act on Special Measures for Securing Financial Resources Necessary to Implement Measures for Reconstruction following the Great East Japan Earthquake” (Act No.117 of 2011), Japanese corporation tax rates will be reduced and the special reconstruction corporation tax will be imposed for the fiscal years beginning on or after 1st April, 2012.

The Company and its domestic subsidiaries changed the statutory tax rate used to measure deferred tax assets and liabilities from 40.49% to 37.75% for temporary differences expected to be settled or realized in the fiscal years beginning 1st April, 2012 until 31st March, 2015 and from 40.49% to 35.38% for temporary differences expected to be settled or realized in the fiscal years beginning 1st April, 2015.

As a result of these changes, the net amount of deferred tax liabilities (net of deferred tax assets) decreased by ¥60 million ($731 thousand), deferred income tax increased by ¥95 million ($1,157 thousand) and net unrealized holding gain on securities increased by ¥154 million ($1,875 thousand) at 31st March 2012 and for the year then ended. Deferred income taxes on land revaluation reserve decreased and land revaluation reserve increased by ¥214 million ($2,606 thousand) at 31st March, 2012.

11. Asset Retirement Obligations

(1) Outline of asset retirement obligations
Asset retirement obligations consist of restoration cost related to lease contracts of domestic technical centers and other.

(2) Calculation method for asset retirement obligations
Expected useful life is 20 years from contract start date and discount rate is 2.179%.

(3) Changes in the balance of asset retirement obligations for the years ended 31st March, 2012 and 2011 are summarized as follows:

<table>
<thead>
<tr>
<th></th>
<th>Millions of yen</th>
<th>Thousands of U.S. dollars</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>2012</td>
<td>2011</td>
</tr>
<tr>
<td>Balance at beginning of the year (*)</td>

<td>¥ 61</td>
</tr>
<tr>
<td>Other adjustments</td>
<td>2</td>
<td>1</td>
</tr>
<tr>
<td>Balance at end of the year</td>
<td>¥ 64</td>
<td>¥ 62</td>
</tr>
</tbody>
</table>

(*) Balance at beginning of the year ended 31st March, 2011 was calculated after the adoption of “Accounting Standard for Asset Retirement Obligations” (ASBJ Statement No.18 issued on 31st March, 2008) and “Guidance on Accounting Standard for Asset Retirement Obligations” (ASBJ Guidance No.21 issued on 31st March, 2008).

12. Shareholders’ Equity

The Corporation Law of Japan (the “Law”) provides that an amount equal to 10% of the amount to be disbursed as distributions of capital surplus (other than the capital reserve) and retained earnings (other than the legal reserve) be transferred to the capital reserve and the legal reserve, respectively, until the sum of the capital reserve and the legal reserve equals 25% of capital stock. Such distributions can be made at any time by resolution of the shareholders or by the Board of Directors if certain conditions are met.

The legal reserve of the Company included in retained earnings is nil at 31st March, 2012 and 2011.

Common stock and treasury stock

</table>

(Note) B.U.G., Inc. is a private company and, therefore, the fair value of stock options is calculated based on the intrinsic value of the stock options. As the intrinsic value of stock options per share is zero, the disclosure of the weighted average fair value per stock at the grant date has been omitted in the above table.
13. Land Revaluation

Effective 31st March, 2002, the Company revalued its land for operational usage in accordance with the laws on land revaluation. The resulting revaluation difference, net of the applicable tax effect on revaluation gain, has been stated as a component of net assets; “Land revaluation reserve” amounted to ¥1,759 million ($21,417 thousand) and ¥1,545 million at 31st March, 2012 and 2011, respectively. The applicable tax effect has been stated as a component of long-term liabilities; “Deferred income taxes on land revaluation reserve” amounted to ¥1,485 million ($18,081 thousand) and ¥1,699 million at 31st March, 2012 and 2011, respectively. The fair value of the revalued land was less than its carrying value by ¥3,678 million ($44,783 thousand) and ¥3,062 million at 31st March, 2012 and 2011, respectively.

14. Contingent Liabilities

At 31st March, 2012 and 2011, the Company had the following contingent liabilities:

<table>
<thead>
<tr>
<th>Liabilities</th>
<th>Millions of yen</th>
<th>Thousands of U.S. dollars</th>
</tr>
</thead>
<tbody>
<tr>
<td>Guarantees of lease payments by customers</td>
<td>¥ 2,276</td>
<td>$ 27,712</td>
</tr>
<tr>
<td>Guarantees of loans of an affiliate</td>
<td>2,469</td>
<td>30,062</td>
</tr>
</tbody>
</table>

(*) This represents guarantees of bank loans of MG Finance GmbH amounting to ¥2,281 million out of which ¥1,140 million was reguaranteed and the amount of the guarantee in substance was ¥1,141 million at 31st March, 2011.

15. Loss on Devaluation of Inventories

Cost of sales included a loss on devaluation of inventories of ¥1,479 million ($18,008 thousand) and ¥1,170 million for the years ended 31st March, 2012 and 2011, respectively. Furthermore, loss on devaluation of inventories is included in business restructuring expenses in the amount of ¥1,271 million ($15,475 thousand) and in loss on disaster in the amount of ¥211 million ($2,569 thousand) for the year ended 31st March, 2012, which were recorded as components of other expenses for the year.

16. Research and Development Costs

Research and development costs included in selling, general and administrative expenses for the years ended 31st March, 2012 and 2011 are as follows:

<table>
<thead>
<tr>
<th>Costs</th>
<th>Millions of yen</th>
<th>Thousands of U.S. dollars</th>
</tr>
</thead>
<tbody>
<tr>
<td>Research and development costs</td>
<td>¥ 3,506</td>
<td>$ 42,688</td>
</tr>
</tbody>
</table>

17. Derivative Financial Instruments

The estimated fair value of the derivatives positions outstanding which do not qualify for deferral hedge accounting at 31st March, 2012 and 2011 is summarized as follows:

<table>
<thead>
<tr>
<th>Contracts</th>
<th>Millions of yen</th>
<th>Thousands of U.S. dollars</th>

There were no derivatives positions outstanding which qualify for deferral hedge accounting at 31st March, 2012.
18. Leases

(1) Finance leases

The Company and its consolidated subsidiaries lease plants (buildings and structures), offices (buildings and structures) and manufacturing facilities (machinery and equipment).

Finance lease transactions commencing on or before 31st March, 2008 other than those in which the ownership of the leased assets is transferred to the Company and its domestic consolidated subsidiaries are accounted for in the same manner as operating leases.

The following pro forma amounts represent the acquisition costs, accumulated depreciation and net book value of the property leased to the Company and its domestic consolidated subsidiaries at 31st March, 2012 and 2011, which would have been reflected in the accompanying consolidated balance sheets if finance leases other than those which transfer the ownership of the leased property to the Company and its domestic consolidated subsidiaries were capitalized.

<table>

<td>$58,407</td>
</tr>
<tr>
<td>Net book value</td>
<td>¥ 526</td>
<td>¥ 1,588</td>
<td>$ 6,405</td>
</tr>
</tbody>
</table>

Lease payments of the Company and a domestic consolidated subsidiary relating to finance lease transactions accounted for as operating leases amounted to ¥1,127 million ($13,722 thousand) and ¥1,396 million for the years ended 31st March, 2012 and 2011, respectively.

Depreciation related to leased property of the Company and a domestic consolidated subsidiary is calculated by the straight-line method over the respective lease terms assuming a nil residual value and amounted to ¥1,046 million ($12,736 thousand) and ¥1,299 million for the years ended 31st March, 2012 and 2011, respectively.

Interest expenses for finance leases amounted to ¥28 million ($341 thousand) and ¥58 million for the years ended 31st March, 2012 and 2011, respectively under the interest method mentioned above.

Future minimum lease payments subsequent to 31st March, 2012 under finance leases other than those which transfer the ownership of the leased property to the Company and a domestic consolidated subsidiary are summarized as follows:

19. Financial Instruments

Status of financial instruments

(1) Policy for financial instruments

The Company and its consolidated subsidiaries (the “Group”) raise necessary capital partly by issuing the bonds, borrowings from banks and liquidation of receivables for mainly operations related to the manufacturing and sales of machine tools based on demand for funds from operating activities. The Group manage surplus funds by investing only in short-term deposits and others and do not enter into speculative transactions. The purpose of derivative transactions is avoiding the risks as described hereinafter, and transactions are not carried out for speculative purposes.

(2) Types of financial instruments and related risk

Notes and accounts receivable, trade are operating claims and are exposed to credit risk of customers. In addition, as a result of the business of the Group, which operates globally, trade receivables denominated in foreign currencies are exposed to currency rate fluctuation risk, which is hedged using forward exchange contracts limited to the necessary amounts, reviewing actual export performance. Most operating claims are settled within three months.

Marketable securities and investments in securities are mainly shares of companies, with which the Group has business relationship, and are exposed to market price fluctuation risk.

Accounts payable, trade are operating obligations and mostly are payables within three months. A portion of these is denominated in foreign currencies, and is exposed to currency rate fluctuation risk. However, the portion is within the range of balances of accounts receivable denominated in the same currencies.

Short-term bank loans and bonds are mainly utilized for short-term operating capital and capital expenditure. The repayments dates of short-term bank loans and the bonds extend up to four years and six months from the balance sheet date. Monthly cash flows are reviewed and refundings...
are repeated within one month so as to realize efficient financing. A portion of short-term bank loans has some financial covenants. Bonds with fixed interest rate are not exposed to interest rate fluctuation risk.

Accounts payable, trade and short-term bank loans are exposed to liquidity risk. Derivative transactions are forward foreign exchange contracts entered into in order to avoid the risk arising from fluctuations in foreign currency exchange rates related to operating claims.

(3) Risk management for financial instruments

(a) Monitoring of credit risk (the risk that counterparties may default)

The Group regularly monitors the credit information related to customer operating claims and manages collection dates and outstanding balances in accordance with credit control policy.

To minimize the counterparty risk when entering into derivative transactions, counterparties are limited to financial institutions with high credit ratings.

The maximum amount of credit risk as of the end of the fiscal year reflects the amounts recorded in the consolidated balance sheets for financial assets that are exposed to credit risk.

(b) Monitoring of market risks (the risks arising from fluctuations in foreign exchange rates, interest rates and others)

The Company hedges risks arising from fluctuations in foreign exchange rates, which are relevant to operating claims and are analyzed by currency and settlement month, by using forward foreign exchange contracts. The foreign-currency denominated operating claims that are expected to be most likely resulting from forecasted export transactions are hedged by using forward foreign exchange contracts depending on circumstances in the foreign currency exchange market.

The fair value of marketable securities and investments in securities and the financial position of the issuers are regularly reviewed.

For derivative transactions, the finance department of the Company enters into and manages transactions, and the responsible director approves them based on internal regulations. The consolidated subsidiaries do not enter into derivative transactions.

(c) Monitoring of liquidity risk (the risk of being unable to make payment on payment date)

The finance department of the Company prepares and updates funding plans in a timely manner based on reports submitted by each department to manage liquidity risk.

(4) Supplementary explanation of the fair value of financial instruments

The fair value of financial instruments is based on the market price, and when no market price exists, a rationally calculated amount is used. These calculations include variable factors, so the resulting amount may fluctuate if different underlying assumptions are applied. The amounts of the contracts related to derivative transactions listed in the following section do not in themselves indicate the market risk of derivative transactions.

Fair value of financial instruments

The amounts recorded in the consolidated balance sheets, the fair value and the difference at 31st March, 2012 and 2011, are summarized as follows. Financial instruments for which it is deemed extremely difficult to determine the fair value are not included. (Please refer to Note 2 below.)

</table>

(*) The value of assets and liabilities arising from derivatives is shown at net value.
Note 1: Methods to determine the fair value of financial instruments and other matters related to securities and derivative transactions are summarized as follows:

**Cash and deposits**
Since a portion of deposits represents time deposits with maturities within one year, their carrying value approximates fair value.

**Notes and accounts receivable, trade**
Since most of them are settled in a short time period, their carrying value approximates fair value.

**Marketable securities and investments in securities**
The fair value of marketable securities and investments in securities is based on quoted exchange market prices for equity and debt securities.

**Short-term bank loans**
Since most of them are repaid within one month in accordance with financing plans, their carrying value approximates fair value.

**Accounts payable, trade**
Since most of them are settled in a short time period, their carrying value approximates fair value.

**Bonds**
The fair value of bonds is determined based on market price.

Note 2: Financial instruments for which it is extremely difficult to determine the fair value are summarized as follows:

20. Business Restructuring Expenses

Taking into account its collaboration with GILDEMEISTER ("DMG") AG, the Company reconsidered its structuring of production, development and sales to operate the business more solidly. Consequently, devaluation of inventories of discontinued products, cost related to sales integration in Europe, cost for liquidation of a subsidiary, loss on impairment of a patent and other costs were recorded as business restructuring expenses for the year ended 31st March, 2012.

**Loss on impairment of a patent for the year ended 31st March, 2012** is summarized as follows:

<table>
<thead>
<tr>
<th>Note 3</th>
<th>Millions of yen</th>
<th>Thousands of U.S. dollars</th>
</tr>
</thead>
<tbody>
<tr>
<td>¥ 150</td>
<td>$ 2,826</td>
<td></td>
</tr>
</tbody>
</table>

The Company recognized a loss on impairment of a patent acquired for future research and development since the profitability and possibility of usage of this patent was uncertain due to a focus on improving the main product "X class" in terms of future research and development activities.

The Company basically groups assets by operating department. The assets are grouped by sales office in the sales department and by plant in the manufacturing department. Idle assets not expected to be used in the future are grouped individually. The recoverable amount of the patent is measured based on its estimated cash flows in the future, using their value in use.

Business restructuring expenses for the year ended 31st March, 2011 included mostly office relocation costs associated with organizational restructuring.
### 21. Related Party Transaction

Transactions with related parties for the year ended 31st March, 2012 are summarized as follows:

<table>
<thead>
<tr>
<th>Type</th>

23. Supplemental Information on the Consolidated Statements of Cash Flows

(1) Non cash transaction

The Company and its consolidated subsidiaries recorded leased assets and lease obligations related to new finance lease transactions in the amounts of ¥303 million ($3,689 thousand) and ¥306 million for the years ended 31st March, 2012 and 2011, respectively.

The Company recorded asset retirement obligations in the amount of ¥62 million for the year ended 31st March, 2011.

(2) Business transfer

MORI SEIKI G.m.b.H., a consolidated subsidiary of the Company, which managed sales and service operations in Germany transferred a portion of its business to DMG MORI SEIKI Deutschland GmbH. The Company recorded ¥1,132 million ($13,783 thousand) as proceeds from business transfer in the statement of cash flows for the year ended 31st March, 2012. In addition, inventories, property, plant and equipment and others decreased by ¥365 million ($4,444 thousand) resulting from this business transfer.

(3) Contribution in kind

During the year ended 31st March, 2012, the Company executed a contribution in kind of all shares of its four subsidiaries to DMG MORI SEIKI Europe AG. Detail of assets and liabilities decreased resulting from the contribution in kind are summarized as follows:

<table>
<thead>
<tr>
<th>Description</th>
<th>Millions of yen</th>
<th>Thousands of U.S. dollars</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current assets</td>
<td>¥7,178</td>
<td>$87,398</td>
</tr>
<tr>
<td>Long-term assets</td>
<td>201</td>
<td>2,447</td>
</tr>
<tr>
<td>Total assets</td>
<td>¥9,004</td>
<td>$109,631</td>
</tr>
<tr>
<td>Current liabilities</td>
<td>¥6,874</td>
<td>$83,697</td>
</tr>
<tr>
<td>Long-term liabilities</td>
<td>117</td>
<td>1,424</td>
</tr>
<tr>
<td>Total liabilities</td>
<td>¥6,991</td>
<td>$85,121</td>
</tr>
</tbody>
</table>

Current assets included cash and cash equivalents of ¥1,505 million ($18,325 thousand), which were recorded as expenditures for business divestiture in the statement of cash flows for the year ended 31st March, 2012.

24. Amounts per Share

Amounts per share at 31st March, 2012 and 2011 and for the years then ended are summarized as follows:

<table>
<thead>
<tr>
<th>Description</th>
<th>2012</th>
<th>2011</th>
<th>2012</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yen</td>
<td>U.S. dollars</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Net assets</td>
<td>¥852.31</td>
<td>¥848.74</td>
<td>$10.36</td>
</tr>
<tr>
<td>Net income:</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Basic</td>
<td>51.13</td>
<td>11.83</td>
<td>0.62</td>
</tr>
<tr>
<td>Diluted</td>
<td>50.22</td>
<td>11.82</td>
<td>0.81</td>
</tr>
<tr>
<td>Cash dividends</td>
<td>¥20.00</td>
<td>$2.44</td>
<td>0.24</td>
</tr>
</tbody>
</table>
Net assets per share are computed based on the net assets available for distribution to the shareholders and the number of shares of common stock outstanding at the year end. Basic income per share is computed based on the net income attributable to shareholders of common stock and the weighted-average number of shares of common stock outstanding during each year, and diluted net income per share is computed based on the net income attributable to shareholders of common stock and the weighted-average number of shares of common stock outstanding during each year after giving effect to the dilutive potential of shares of common stock to be issued upon the exercise of stock options.

Cash dividends per share represent the cash dividends proposed by the Board of Directors of the Company as applicable to the respective fiscal years.

An outline of dilutive shares not included in the calculation of “Net income per share (diluted)” for the years ended 31st March, 2012 and 2011 because they do not have dilutive effect is as follows:

Stock acquisition rights issued by the Company:
Type: 2 types
Number of stock acquisition rights issued by the Company as part of a stock option plans: 12,790 units and 12,960 units at 31st March, 2012 and 2011, respectively.

Stock acquisition rights issued by a domestic consolidated subsidiary:
Type: 1 type
Number of stock acquisition rights issued by a consolidated subsidiary as a part of stock option plan: 535 units and 551 units at 31st March, 2012 and 2011, respectively.

25. Segment Information

(1) Outline of the reportable segments
The reportable segments of the consolidated group are components for which discrete financial information is available and whose operating results are regularly reviewed by the Board of Directors and corporate officers to make decisions about resource allocation and to assess business performance.

The Group’s business is mainly manufacturing and sales of machine tools. The Company and its domestic subsidiaries are responsible for Japan and each independent local entity is responsible for an overseas area. The Group develops their own comprehensive business strategies and operates their businesses.

Accordingly, the Group’s reportable segments consist of Japan, the Americas, Europe and China and Asia based on the production and selling system.

(2) Calculation method of net sales, income or loss, assets and other items by each reportable segment
Method of accounting treatments for the reportable segments is almost the same as those described in Note 2. “Summary of Significant Accounting Policies.” The amount of segment income (loss) is based on operating income (loss). Inter-segment sales and transfers between segments are based on market prices.

(3) Information on net sales, income or loss, assets and other items by reportable segment
Reportable segment information for the year ended 31st March, 2012 and 2011 are summarized as follows:

Loss on impairment of a patent was recorded as business restructuring expenses in the amount of ¥150 million ($1,826 thousand) for the year ended 31st March, 2012. The reportable segment in which the loss was recorded was Japan.

There was no loss on impairment of property, plant and equipment for the year ended 31st March, 2011.

26. Business Combinations

Business transfer in the consolidated subsidiary

(1) Overview of the business divestiture
   (a) Name of the transferee
      DMG MORI SEIKI Deutschland GmbH
   (b) Nature of the business
      Sales of Mori Seiki products and service operation of MORI SEIKI G.m.b.H. in Germany
   (c) The purpose of the business divestiture
      It will enable the Company to sell its products through the subsidiary of DMG. DMG has a strong presence in European markets. The Company believes that in order to facilitate sales of high value-added machine tool products, which are the core products of the Company’s sales strategy, it will be increasingly important to further develop sales and service functions to maintain a direct contact with customers and satisfy customer needs by delivering enhanced post-sales maintenance services as well as by providing software, customer training and technical assistance. The Company is confident that DMG’s direct selling system will enable the Company to satisfy its customers’ needs.
   (d) Date of business divestiture
      30th September, 2011
   (e) Overview of other transactions including its statutory form
      Business transfer for which consideration received is limited to assets including cash.

(2) Overview of accounting treatment
   (a) Amount of gain on business transfer
      ¥576 million ($7,013 thousand)
   (b) Appropriate book value of assets pertaining to the transferred business
      Inventories, property, plant and equipment and others of ¥365 million ($4,444 thousand)

(3) Name of reportable segment in which the transferred business was included
   Europe
Contribution in kind

(1) Overview of the business divestiture
(a) Overview of the transferee
Name of the transferee: DMG MORI SEIKI Europe AG
Common stock: CHF76 million (after contribution in kind by the Company and DMG)
Location: Zurich, Switzerland
Shareholders: 60% owned by DMG, 40% owned by the Company
Relation to the Company: Affiliate company accounted for by the equity method
(b) Name and nature of the business transferred
Name: MORI SEIKI (UK) LIMITED, MORI SEIKI FRANCE SAS,
MORI SEIKI ITALIANA S.R.L., MORI SEIKI ESPANA, S.A.
Nature: Machining center, sales of numerically controlled machine tools and other products and service
(c) Purpose of the transfer
The Company has executed the contribution in kind of all shares of four subsidiaries, which operated sales and service of the Company’s
group products in Europe, to DMG MORI SEIKI Europe AG, a joint venture between the Company and DMG, and in exchange obtained 40% of
shares in DMG MORI SEIKI Europe AG on 26th March, 2012. Likewise, DMG has executed contribution in kind of all shares of some of its
subsidiaries in Europe and in exchange obtained 60% of shares in DMG MORI SEIKI Europe AG.
As a result of this contribution in kind, the Company can consolidate its sales and service operations with DMG. DMG has a strong presence
in European markets and the Company believes that the consolidation of the two companies’ sales and service platforms will facilitate sales
growth for the Company’s products in the region.
(d) Date of business divestiture
1st January, 2012
(e) Overview of other transactions including its statutory form
The Company and DMG execute the contribution in kind of shares of each own subsidiary to DMG MORI SEIKI Europe AG and in exchange
obtain respective shares.

(2) Overview of accounting treatment
This transaction was accounted for as a transfer under “Accounting Standard for Business Divestitures” (ASBJ Statement No.7, 26th December,
2008) and “Guidance on Accounting Standard for Business Combinations and Accounting Standard for Business Standard for Business
Divestitures” (ASBJ Guidance No.10, 26th December, 2008).
(a) Goodwill and gain on change in equity in

</tbody>
</table>

(3) Name of reportable segment in which the consolidated subsidiaries were included
Europe

(4) Estimated amounts of net sales and operating income of the above subsidiaries included in the consolidated statement of income for the year
ended 31st March, 2012 amounted to ¥14,821 million ($180,458 thousand) and ¥372 million ($4,529 thousand), respectively.
27. Subsequent Events

(1) Appropriation of retained earnings

The following distribution of retained earnings of the Company, which has not been reflected in the accompanying consolidated financial statements for the year ended 31st March, 2012, was approved at the annual general meeting of the shareholders of the Company held in 15th June, 2012.

(2) Construction of a new plant

The Company passed a resolution to construct a new plant in Tianjin, China at the Board of Directors meeting held on 7th May, 2012.

(a) Reason for plant construction

To cope with the growing demands for machine tools in China, the Company aims to shorten the delivery time by manufacturing machines at a closer location to customers and reduce logistics cost from Japan as well as manufacturing cost. The Company also will continue operating MORI SEIKI (SHANGHAI) CO., LTD., a wholly owned subsidiary in Shanghai, China, as a base of selling products manufactured at the new plant in Tianjin.

(b) Overview of plant construction

- Location: West zone, Tianjin Economic-Technological Development Area, Tianjin, China
- Site area: Approximately 90,000 m²
- Building area: Approximately 24,000 m² (plan for the first phase)
- Date of start of production: September, 2013
- Total investment: Approximately ¥4 billion ($49 million) (plan for the first phase)
- Production items: NC machine tools and peripheral equipment
- Production capacity: 100 units / month (plan for the first phase)
- Employees: 200 employees (plan for the first phase)

Independent Auditors' Report

The Board of Directors
Mori Seiki Co., Ltd.

We have audited the accompanying consolidated financial statements of Mori Seiki Co., Ltd. and its consolidated subsidiaries, which comprise the consolidated balance sheet as at 31st March, 2012, and the consolidated statements of income, comprehensive income, changes in net assets, and cash flows for the year then ended and a summary of significant accounting policies and other explanatory information, all expressed in Japanese yen.

Management's Responsibility for the Consolidated Financial Statements
Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with accounting principles generally accepted in Japan, and for designing and operating such internal control as management determines is necessary to enable the preparation and fair presentation of the consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility
Our responsibility is to express an opinion on these consolidated financial statements based on our audit. We conducted our audit in accordance with auditing standards generally accepted in Japan. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. The purpose of an audit of the consolidated financial statements is not to express an opinion on the effectiveness of the entity's internal control, but in making these risk assessments the auditor considers internal controls relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Opinion
In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the consolidated financial position of Mori Seiki Co., Ltd. and consolidated subsidiaries as at 31st March, 2012, and their consolidated financial performance and cash flows for the year then ended in conformity with accounting principles generally accepted in Japan.

Convenience Translation
We have reviewed the translation of these consolidated financial statements into U.S. dollars, presented for the convenience of readers, and, in our opinion, the accompanying consolidated financial statements have been properly translated on the basis described in Note 1.

Issues to be Addressed

(1) Product development
Launched in 2010, the X-class series is a new range of machines which has replaced our previous flagship models and set new standards in terms of accuracy and cutting ability. This year, we plan to further expand the range of the X-class machines by introducing more products to the line-up. We will also develop high-productive machines for mass production lines of parts to satisfy many demands from customers in Japan and overseas. Furthermore, we will strive to develop new technology such as a super-high-speed, continuous in-machine measuring system using laser and a chip disposal system that vacuums chips, which are created at machining point, into the spindle to prevent chips from scattering in the machining chamber.

(2) Quality
Quality includes all activities, from product planning to sales and service, in which we relate to customers through our products. We all work hard to improve quality everyday. For our third medium-term management plan “GQ-C-SI 123” (started in FY 2011), we unveiled a new slogan, “Let’s make an impression on customers by providing high-quality machines!” This slogan emphasizes and highlights the care and attention to detail that we put into our machines. In addition to quality, we will begin manufacturing “NHX series” horizontal machining centers at the new plant in North America from this July. We will strive to ensure that the quality of the machines produced at this new plant will be equivalent to those manufactured in Japan. The Mori Seiki Group will continue to implement important measures to improve quality.

(3) Trade Controls for Security
With recent deterioration in security situation, particularly in the Asian countries, international concern about measures to prevent the proliferation of weapons of mass destruction and the excess stockpiling of conventional weapons has been growing. To address this, the Mori Seiki Group has established internal regulations (Compliance Program) to ensure compliance with export control laws. Additionally, to prevent the illegal export of our products, we have become the first in the machine tool industry to install the function that detects and disables a machine if the machine is relocated from the site where it is originally installed. We will continue to address security trade issues as our top-priority.

(4) Compliance with the Law
Management puts emphasis on the importance of carrying out corporate activities in compliance with the law and instilling corporate ethics to all employees. We also increase directors’ and employees’ awareness of laws by conducting training and education on a regular basis. To address the dynamic global business environment, we are constantly challenging our current structure and systems to better comply with changing laws and regulations not only within Japan but also globally. As the Internal Auditing Department in the key role, we have developed a system to monitor the status of compliance with laws and regulations, and are constantly working on strengthening internal control.
Business and other risks

Among the various financial and operational facts and statistics disclosed in the Annual Report, the following information has been determined to have importance in influencing the decision-making process for investors. Note that the forecasts and future events stated in this report are those described in the securities report submitted by Mori Seiki on 15th June, 2012.

(1) The economic conditions in key markets (Japan, the Americas, Europe and China/Asia)
The percentage composition by region of the Mori Seiki Group’s consolidated net sales for the term under review is 35.5% for Japan, 28.4% for the Americas, 21.5% for Europe, and 14.7% for China/Asia. In any of the regions where the Mori Seiki Group sells and provides its products and services, there is a possibility that the Group’s business results may be adversely affected in cases where demand for Mori Seiki products and services decline due to the deterioration of the economic trend.

(2) Sudden fluctuations in demand for investment in plant and equipment
While the economies of emerging countries like those of Asia, the BRICs, and central Europe, are expanding and the machine tool markets in Japan, the Americas, and Europe have also continued to experience stable growth over the medium and long term, there is a possibility that both product prices and numbers of units sold could drop suddenly and substantially due to unforeseeable events, which may cause adverse effects on the business activities, business results and financial status of the Mori Seiki Group.

(3) Influence of Market Competition
Since the number of companies entering the machine tool industry is large and there are some overseas companies that supply low-cost products, the Mori Seiki Group is exposed to fierce competition in each market, and it is difficult to set advantageous prices for the products. The Mori Seiki Group is promoting measures to develop products that are differentiated from the competition by strengthening technical capabilities, such as reducing the cost of raw materials, and strengthening sales capabilities. However, if these promotional measures prove to be difficult to maintain or expand market share or maintain profitability in the future, there could be adverse effects on the activities, business results and financial status of the Mori Seiki Group.

(4) Corporate mergers and acquisitions, and capital and business collaboration
The Mori Seiki Group ranks mergers, acquisitions, and capital and business collaboration as an important strategy for strengthening its business base.

Looking ahead, depending on the success or failure of the corporate mergers, acquisitions, and capital and business collaborations that we engage in, there could be adverse effects on the Mori Seiki Group’s activities, business results and financial status.

(5) Significant changes in the exchange rate against the yen of the U.S. dollar, Euro, etc.
The business activities, business results, and financial status of the Mori Seiki Group have been adversely affected by fluctuations in the foreign currency market. Asset and liability transactions denominated in foreign currency are impacted by the fluctuations of the exchange rates when converted to Japanese yen. Fluctuations in exchange rates also affect the prices of products and services, and sales transactions that are denominated in foreign currency. In order to reduce these effects, we are attempting to achieve a balance among the domestic and Asian transactions denominated in yen, American transactions denominated in U.S. dollars, and the European transactions denominated in Euros. Regardless, there is a possibility that the activities, business results, and financial status of the Mori Seiki Group will be adversely affected.
Business and other risks

(6) Significant changes in the cost of natural resources or raw materials
If we have to face a situation where prices of raw materials have soared significantly in excess of expectations, the business results of the Mori Seiki Group may be adversely affected. We have a policy for covering the soaring costs of raw materials by lowering the costs through negotiation with the suppliers and by passing on rises to the prices of products, but if the costs continue to soar or if measures such as cost negotiations with suppliers are unsuccessful, the activities, business results, and financial status of the Mori Seiki Group may be adversely affected.

(7) Security trade management
Important changes in regulations and laws in many of the countries and regions in which Mori Seiki operates may have an effect on the business activities, business results, and financial status of the Mori Seiki Group. The machine tools that constitute the core business of the Mori Seiki Group are classified as controlled freight under the laws and regulations relating to export in each country and are subject to control under the framework of international export management. If this control is strengthened due to changes in the international situation, it may have adverse effects on the business activities, business results, and financial status of the Mori Seiki Group.

(8) Dependence on specific fields of industry
The concentration of sales of the Mori Seiki Group in the automobile and related industries is relatively high. This means that fluctuations in the business environment in these industries may adversely affect the activities, business results, and financial status of the Mori Seiki Group in the future.

(9) Customer Credit Risks
The Mori Seiki Group is extremely cautious about the credit risk posed by business partners. However, for example, if the credit status of customers with large transaction values deteriorates due to a worsening of the business results of their business partners, the actualization of this risk could adversely affect the activities, business results, and financial status of the Mori Seiki Group.

(10) Financial Covenants
Financial covenants have been applied to some loans, such as committed line-of-credit agreements. If there is any infringement of the financial covenant in the future, it may adversely affect the activities, business results, and financial status of the Mori Seiki Group.

(11) Intellectual Property Rights
The Mori Seiki Group is constantly developing new technology and know-how through research and development and the development of new products, and we are seeking to utilize intellectual property rights by applying to patent this valuable technology and know-how. However, in the event of invalidity claims by third parties in relation to the intellectual property rights of the Mori Seiki Group, or if a lawsuit to stop infringement is filed against us, the activities, business results, and financial status of the Mori Seiki Group may be adversely affected.
(12) Risks Relating to Lawsuits
The Mori Seiki Group is working to achieve the functions and specifications required by the customers and to pursue appropriate quality with consideration to safety, as we aim for comprehensive quality control on a global basis. Nevertheless, if a serious problem arises with the Mori Seiki Group’s products, or if there is a serious accident or there are quality complaints or a recall is initiated, we could be liable to substantial product compensation.
In addition, the Mori Seiki Group is expanding its business both in Japan and overseas, and in the course of carrying on this kind of business, there is the possibility that lawsuits for compensation for damage could be filed against us based on responsibilities that arise during this business.
Currently, no lawsuits that have a major influence on the business results of the Mori Seiki Group have been filed against us, but if such a lawsuit is filed in the future and a disadvantageous judgment is made against us, it may adversely affect the activities, business results and financial status of the Mori Seiki Group.

(13) Effects of Natural Disasters, etc.
The Mori Seiki Group is expanding its sales and service centers globally, so there is the possibility that it will be affected by disasters that may result from many phenomena including unpredictable natural disasters and computer viruses.
The manufacturing bases of the Mori Seiki Group in Japan are in Mie, Nara, Chiba, Kanagawa and Niigata prefectures, and those overseas are in Switzerland, France, and the U.S.A. In the event that any of these manufacturing bases are affected by a natural disaster, such as an earthquake or flood, and rendered unable to supply products, or the supply of products is delayed, the activities, business results, and financial status of the Mori Seiki Group could be adversely affected.

(14) Environmental Problems
In the pursuit of its activities, the Mori Seiki Group is subject to a range of environment-related laws and regulations. The Mori Seiki Group carries on its activities while paying careful attention to these laws and regulations, but it is possible that it could bear a legal or social responsibility relating to the environment in activities that it is currently undertaking or activities that it has undertaken in the past.
We may also note that additional costs associated with compliance with the law will arise in the future as laws and regulations relating to the environment and social requirements in relation to environmental problems become stricter. As a consequence, depending on the trend in laws and regulations relating to the environment, the activities, business results and financial status of the Mori Seiki Group may be adversely affected.

Establishment of the Sponsored American Depositary Receipts (ADR) Program

Mori Seiki established the American Depositary Receipts (ADR) Program on 26th January, 2006 (U.S.A. Eastern Standard Time), to allow the distribution of Mori Seiki shares in the United States in the form of ADRs.

1. Purpose of establishing the ADR program

The purpose is to develop new investors and expand the base of investors, by enhancing investor service and broadening the choices in available investment instruments in the United States capital market. This sponsored program is the first of its kind in the machine tool industry.

2. Details of ADR program

(1) Type of ADR Program: Sponsored Level 1
(2) Trading Market: OTC (over-the-counter) in the United States
(3) Start Date: January 26, 2006 (United States Eastern Standard Time)
(4) Conversion Rate: 1 ADR = 1 ordinary share (1:1)
(5) U.S. CUSIP Number: 617578109
(6) Ticker Symbol: MRSKY
(7) Depositary Bank: The Bank of New York Mellon
   The bank of New York Mellon
   Tel: +1 (201) 680-6825
   U.S. toll free: 888-269-2377 (888-BNY-ADRS)
   URL: http://www.adrbnymellon.com
(8) Local Custodian Bank: Sumitomo Mitsui Banking Corporatio

*1. What is an ADR?

ADR is the acronym for American Depositary Receipts, which are U.S. dollar-denominated transferable registered securities that foreign companies can distribute in the United States instead of the underlying stock. They facilitate investment in foreign stock by United States investors. The underlying stock is held in custody(deposit) in the issuing company’s home country, and ADRs are issued by the depositary bank in the United States based on the underlying stock.

*2. Types of ADR

ADRs are divided into Levels 1-3, depending on whether new stock is issued, whether the stock is listed on United States stock markets, and other conditions. Level 1 offers a convenient means for foreign companies to distribute securities in the United States market, although new stock is not issued and since the company is not listed, stock is traded on the over-the-counter market. By submitting an application for exemption from disclosure to the SEC, as outlined in the 1934 Securities Exchange Act, Rule 12g3-2(b), the company can issue ADRs through disclosure in accordance with Japan’s disclosure standards. It is also easy for non-Japanese investors to invest, because disclosure information is filed with the SEC in English.

*3. Sponsored ADRs

The company issuing the underlying stock(sponsor) concludes a depositary agreement with a specific depositary bank, and ADRs are issued by the depositary bank once the issuer, depositary bank and investor rights and obligations have been clarified. In contrast, unsponsored ADRs are issued by the depositary bank based on investor demand, without any involvement at all from the company issuing the underlying stock.
