### Constant-Temperature Factory Announcement

Mori Seiki is proud to announce that the factories at our Iga Campus in Mie Prefecture (Iga No. 1 Plant, No. 2 Plant, High-Precision Facility) have all become constant-temperature environments.

We have installed new factory doors and a temperature control system, at a cost of approximately 200 million yen.

We have also set up 14 measurement points in the Iga No.1 Plant, 10 in the No. 2 Plant and 10 in the High-Precision Facility. At each of these locations there are highly sensitive thermometers at heights of 0.5 meters, 1.5 meters and 3 meters, capable of sensing temperature variations of 0.1°C. This gives us a total of 102 measurement points, allowing us to closely monitor the temperature throughout the entire factory.

We can watch the data from this system in real time by computer through our internal LAN network.

In this way we are able to hold temperature changes within  $\pm 1^\circ\text{C}$ , preventing distortion in machines, so that we can produce machines with even higher levels of precision.

This year we will install similar systems at our Nara and Chiba Campuses, which will be able to hold temperature variations within a range of  $\pm 0.8^\circ\text{C}$ .

In order for us to achieve our medium-term management plan, the Mori-568PLAN, our customers must have confidence in the quality of the machines we deliver. This investment is part of our efforts toward this goal. By making a wide range of even more high-precision products, we aim to attain a 5% share of the world market by the end of Fiscal Year 2007.
