# **MAPPS III High-Performance Operating System Goes Even More Global Screen Displays are Now Available for BRICs and Central Europe**

**Providing easy-to-use machines for our customers worldwide.**

Mori Seiki Co., Ltd.'s MAPPS III high-performance operating system screen display is now available in **5 more languages (Russian, Polish, Czech, Hungarian, Slovenian)**. We will start accepting orders for machines with this function from **February 1**.

With the recent growth in demand for machine tools in BRICs and Central Europe, the number of orders for our products in those regions has increased dramatically. Taking these market trends into account, we have been strengthening our global support system by reinforcing our sales outlets and personnel in those regions.

As a part of these efforts, we have made MAPPS III even more global. In addition to the 13 languages which were already available for the screen display, including Japanese, English and German, we have added 5 more languages for Russia and Central Europe. Since we have had many requests for these 5 languages, we believe that this will make MAPPS III **easy to use and familiar** for even more customers. We have also prepared operating manuals for MAPPS III in all these languages so that you can use it with peace of mind.

In future, Mori Seiki will continue to offer the value which customers need and to support the manufacturing industry throughout the world, by standing in the customer's shoes.

### ■ About MAPPSⅢ

This is a high-performance operating system which is installed in Mori Seiki machines. With its improved processing capacity and conversational functions, tool management functions, etc, it allows shorter programming and setup times. Moreover, we have added various new functions, such as 3D interference checking and USB interface, aiming for a system which will provide our customers with even greater satisfaction. Its comprehensive, easy-to-use design has been highly praised throughout the world.
