Flood-Hit Ayutthaya Technical Center Fully Restored

Mori Seiki Co., Ltd. is pleased to announce that the company's flood-hit Ayutthaya Technical Center has fully resumed its operations.

The Ayutthaya Technical Center was severely damaged by last year's flooding in Thailand and forced to suspend its operations. After the flooding, Mori Seiki resumed operations in Thailand at its Bangna Technical Center located in a suburb of Bangkok to help flood-affected customers restore their factories and resume production. And now, as the restoration work was completed, the Ayutthaya Technical Center has returned to full-scale operations.

The Ayutthaya Technical Center is situated in the Rojana Industrial Park, one of the largest industrial complexes in the area, and houses a showroom and the Mori Seiki University, a corporate educational facility for internal and external engineers. The Parts Center is also located in the Technical Center, which enables us to quickly deliver parts to customers across Southeast Asia.

With the full restoration of the Ayutthaya Technical Center, Mori Seiki will strive to increase customer satisfaction by offering even better support and service.
