# Next-Generation X-Class Achieves Global Total Sales of 10,000 Units

DMG MORI SEIKI CO., LTD. (hereinafter called DMG MORI SEIKI) is pleased to announce that the global cumulative sales of the X-class, a line of next-generation machine tools that offer the highest levels of precision, quality and reliability, crossed the 10,000 unit mark in October 2014. The X-class series has been well-received by many customers since its launch in 2010, and successfully reached this milestone in about 18 months after the achievement of 5,000 units in April 2013.

The X-class, evolved from our best-selling N series, was designed based on the requests and demands we received from thousands of customers for the N series. The X-class machines are capable of achieving high precision, high quality and high reliability, which makes themselves investment-worthy for customers.

DMG MORI SEIKI has been expanding the X-class variations in response to customers' needs for high-speed, high-precision machining since September 2010 when we launched the NLX 2500 high-rigidity, high-precision CNC lathe as the first X-class machine. We can now proudly offer each series of the X-class that is equipped with distinctive and outstanding features to meet a variety of customers' needs: the NVX series, high-rigidity vertical machining centers that employ slideways on all axes; the NHX series, high-precision horizontal machining centers that are equipped with a direct scale feedback as standard; the NTX series, mill turn centers that enable high-precision complete machining; and the NZX series, multi-axis turning center equipped with up to three turrets to achieve high-efficiency machining.

In this fiscal year DMG MORI SEIKI started taking orders for the second generation models of the X-class featuring the newly developed operating system CELOS that allows for touch panel operation and the new machine design that overturns the conventional image of factory equipment. The new design and CELOS are being rolled out to all X-class series.

We manufacture X-class machines in conjunction with our German cooperation partner DMG MORI SEIKI AKTIENGESELLSCHAFT by utilizing both companies' production plants across the world, including those in Japan, Europe and the U.S.A. Manufacturing machine tools at optimal locations enables us not only to reduce delivery times and logistics costs, but also to hedge foreign exchange risk.

DMG MORI SEIKI will continue to expand its product lineup to offer machine tools that are reliable, highly functional and worthy of investment in order to meet each and every customer's needs.

<X-Class Lineup >

CNC lathe	NLX 1500	NLX 2000
	NLX 2500	NLX 3000
	NLX 4000	
Vertical machining center	NVX 5060	NVX 5080
	NVX 5100	NVX 7000
Horizontal machining center	NHX 4000	NHX 5000
	NHX 5500	NHX 6300
	NHX 8000	NHX 10000
Mill turn center	NTX 1000	NTX 2000
Multi-axis turning center	NZX 1500	NZX 2000
	NZX 2500	NZX 4000
	NZX 6000	
	NZX-S 1500	NZX-S 2500
