

Press Release

April 27th, 2023

Opening of DMG MORI ACADEMY Hamamatsu

DMG MORI CO., LTD (hereinafter “DMG MORI”) has opened a new DMG MORI ACADEMY Hamamatsu as a training facility for customers and local students to study advanced machining on 5-axis machine tools.

In the past, DMG MORI had already opened 3 academies in Tokyo (Koto-ku), Iga (Mie Prefecture), and Nagoya (Aichi Prefecture) to support the NC-machine training of young engineers and customers. Since 2018, DMG MORI also offers private machining lessons on weekends to members of the 5-Axis Machining Association. So far, we have dispatched our engineers to 200 different locations in Japan and have conducted over 2,500 private lessons with over 6,000 participants.

Building on these achievements, DMG MORI has decided to open 5 additional academies across Japan until 2025 to offer practical training on actual machines to customers and students at each location. The first new academy is now open in Hamamatsu. The other four academies will be opened in Kanazawa (May 2023), Sendai (August 2023), Okayama (2024), and Fukuoka.

Each academy will be equipped with DMG MORI machines and devices, including the DMU 50 3rd Generation 5-axis machine, the NTX 1000 2nd Generation mill-turn center, the DX platform TULIP, and more. Our experienced engineers will provide private lessons that are tailored to the different needs of each customer. To maximize the learning effect, customers can also learn with the e-learning courses provided by “DMG MORI Digital Academy” at home, while taking practical lessons on the weekends. Customers are free to design their own study schedules that combine hands-on classroom lessons with online courses.

DMG MORI ACADEMY Hamamatsu will start offering 4- to 5-day programs twice a month from May. The opening ceremony was held together with customers and school officials in the area on April 26th.

DMG MORI will continue to promote Machining Transformation (MX) around the world through process integration, automation, digital transformation (DX), and green transformation (GX). Machining Transformation not only maximizes productivity, but also helps to reduce CO2 emissions and save resources through lean production.
