Opening of DMG MORI ACADEMY Okayama

DMG MORI CO., LTD. (hereinafter “DMG MORI”) has opened a new DMG MORI ACADEMY in Okayama as a training facility for customers and local students to study advanced machining on 5-axis machine tools. The opening ceremony of the academy in Okayama was held together with customers and school officials in the area on May 28th.

In the past, DMG MORI had already opened 3 academies in Tokyo (Koto-ku), Iga (Mie Prefecture), and Nagoya (Aichi Prefecture) to support the NC-machine training of young engineers and customers. DMG MORI has decided to open 5 additional academies across Japan until 2025 to offer practical training on actual machines to customers and students at each location. Following the opening in Hamamatsu in April 2023, Kanazawa in May 2023 and Sendai in September 2023, Okayama is now the fourth academy to open. The remaining academy will be opened in Kyushu region after 2025.

The academy in Okayama is equipped with DMG MORI machines and devices, including the DMU 75 monoBLOCK 2nd Generation 5-axis machine, the NTX 1000 2nd Generation mill-turn center, the DX platform TULIP, and more. Our experienced engineers will provide private lessons that are tailored to the different needs of each customer. To maximize the learning effect, customers can also learn with the e-learning courses provided by “DMG MORI Digital Academy” at home, while taking practical lessons on the weekends. Customers are free to design their own study schedules that combine hands-on classroom lessons with online courses.

DMG MORI ACADEMY also offers an internship program for technical college students, aimed at fostering highly skilled engineers who will drive innovation in production technology. During the program, students (1) learn about machine tool principles and operations, as well as the basics of production technology using 5-axis machine tools, (2) gain hands-on experience with cutting-edge technology such as robots and digital tools, and (3) explore process integration, automation, and digitization, along with advanced technologies to achieve MX (Machining Transformation). In 2024, we aim to have a total of 400 participants from 57 technical colleges and technical high schools nationwide. We will hold additional events and seminars at each of our academy locations to introduce the latest technologies to realize MX.
